

Alas! that it should ever have been born!

MORAL PHYSIOLOGY;

OR,

A Brief and Plain Treatise

ON

THE POPULATION QUESTION.

BY

ROBERT DALE OWEN,

AUTHOR OF "FOOTFALLS ON THE BOUNDARY OF ANOTHER WORLD,"
ETC. ETC.

"The principle of utility is the foundation of the present work."

BENTHAM *on Morals and Legislation.*

"The diseases of Society can, no more than corporeal maladies, be prevented or cured, without being spoken about in plain language."

JOHN STUART MILL.

A NEW EDITION.

LONDON:

E. TRUELOVE, 256, HIGH HOLBORN.

“ The Frontispiece which accompanies this treatise, represents a poor mother abandoning her infant, at the gate of the Hôtel des Enfants trouvés, (Foundling Hospital) at Paris. The original painting is by Vigneron, a French artist of celebrity; it was purchased at the price of one thousand dollars for the Gallerie Royale, and is now in the possession of the French king.

The Hôtel des Enfants trouvés, than which a more humane institution was never founded, exhibits, in its every arrangement, order, economy, and, above all, a beautiful tenderness to the feelings of those poor creatures who are thus compelled to avail themselves, for their offspring, of the asylum it affords. No obtrusive observation is made, no unfeeling question asked: the infant charge is received in silence, and either trained and supported until maturity, or, if circumstances, at any subsequent period, enable the parents to claim their offspring, it is restored to their care.

There is surely no sect, of creed so frozen, or ritual so rigid, that it can systematize away the common feelings of humanity, or dry up, in the breasts of some gentler spirits, the milk of human kindness. The benevolent founder and indefatigable supporter of this noble institution, was a Jesuit! Be the good deeds of St. Vincent de Paul remembered, long after the intrigues and cruelties of his fellow sectaries are forgotten!

The case selected is one of mild, of modified,—I had almost said, of *favoured* misfortune: an extreme case were too revolting for representation. But even under these comparatively happy circumstances, when benevolence extends her Samaritan care to the destitute and the forsaken, who that regards for a moment the abandoned helplessness of the deserted child, and the mute distress of the departing mother, but will join in the exclamation, “ Alas! that it should ever have been born!”

PREFACE

TO THE EIGHTH EDITION.

(*Published in London.*)

I AM requested to permit and to revise an English reprint of "MORAL PHYSIOLOGY;" and I accede to the request because the same deep conviction of the importance of the views and recommendations therein contained, which nearly two years ago, first prompted their publication, has been still confirmed to me, in the strongest manner, during the lapse of that period.

Myself a husband and a proprietor of land, my stake in society may absolve me, in the eyes of those who require such securities, from the suspicion of a design against domestic virtue or social order. For the rest, let the work speak for itself. It contains the plain statement of a subject, which deserves to be approached in its broadest and simplest sense; and to be dispassionately investigated, in connexion with its own physical and moral influence on men and women, without reference to favorite theory or political system.

London, September, 1832.

PREFACE

TO THE FIRST EDITION.

(Published in New York.)

It may be proper to state, in few words, the immediate circumstances which induced me to write and publish this treatise.

Some weeks since, a gentleman coming from England brought with him two ingenious specimens of English typography. He had been requested by a Brighton printer, who executed them, to present these, as specimens of the progress of the art in Great Britain, to some of his brother craftsmen in America. He gave them to me; I admired the ingenuity displayed in the performance; but thought they ought to have been presented to some printers' society rather than to an individual. I therefore addressed them to our Typographical Society in New-York, accompanied by a note, simply requesting the society's acceptance of them, as specimens of the art in England.

I thought no more of the matter until I received, the other day, my specimens back again, with a long and angry letter, signed by three of the members, accusing me of principles subversive of every virtue under heaven, and calculated to lead to the infraction of every commandment in the decalogue: and, more especially, of having given my sanction to a work, as they expressed it, "holding out inducements and facilities for the prostitution of our daughters, sisters, and wives."

I subsequently learned from one of the society, circumstances which somewhat extenuate this childish incivility. A gentleman who busied himself last year in making out a notable reply to the "Society for the Protection of Industry," got up, at a late Typographical meeting, and read to the society, several detached extracts from a pamphlet written by Richard Carlile, entitled "Every Woman's Book," which extracts he pronounced to be excessively indecent; and asked the society whether they would receive any thing at the hands of a man who publicly approved a book of a tendency so dreadfully immoral; which, he averred, I had done. The society were (or affected to be) much shocked, and thereupon chose a committee to return the heretical specimens, with the letter to which I have alluded.

PREFACE.

Probably some members of the society really did believe the work to be of pernicious influence. Had some garbled extracts only from it been read to me, I might have misconceived its tendency. But he must be blind indeed, who can read the pamphlet through, and then, (whether he approve it or not,) attribute other than good intentions to the individual who put it forth.

As to the book itself, I was requested, two years since, when residing in Indiana, to publish it, but declined doing so. My chief reasons were, that I somewhat doubted its physiological correctness; that I did not consider its style and tone in good taste; but chiefly (as I expressed it in the *New Harmony Gazette*) because I feared it would be circulated in this country, only "to fall into the hands of the thoughtless, and to gratify the avarice of the licentious, instead of falling, as it ought, into the hands of the philanthropist, of the physiologist, and of every father and mother of a family." The circumstances I have just detailed may afford proof, that my fears regarding the hands into which it might fall, were well founded.

My principles thus officiously and publicly attacked, I have felt it a duty to step forward and vindicate them; and this the rather, because, unless I give my own sentiments, I shall be understood as unqualifiedly endorsing Richard Carlile's. Now, no one admires more than I do the courage which induced that bold advocate of heresy to broach this important subject; and to him be the praise accorded, that he was *the first* to venture it. But the manner of his book I do not admire. There is in it that which was repulsive, (I will not say revolting) to my feelings on the first perusal; and though I afterwards began to doubt whether that first impression was not attributable, in a measure, to my prejudices, yet I cannot doubt that a similar, and even a more unfavorable impression, will be made on the minds of others, and thus the interests of truth be jeopardised. Then again, I think the physiological portion of his pamphlet somewhat incorrect as to the facts, and therefore calculated to mislead, where an error might be of important consequence.

It may seem vanity in me to imagine, that this treatise is free from similar objections; yet I have taken great pains to render

MORAL PHYSIOLOGY.

CHAPTER I.

INTRODUCTORY.

I SIT down to write a little treatise, which will subject me to abuse from the self-righteous, to misrepresentation from the hypocritical, and to reproach even from the honestly prejudiced. Some may refuse to read it; and many more will misconceive its tendency. I would have delayed its publication, had the choice been permitted me, until the public was better prepared to receive it: but the enemies of reform have already foisted the subject in an odious form, on the public; and I have no choice left. If, therefore, I touch the honest prejudices of any, let it be borne in mind, that the occasion is not of my seeking.

The subject I intend to discuss is strictly physiological, although connected, like many other physiological subjects, with political economy, morals, and social science. In discussing it, I must speak as plainly as physicians and physiologists do. What I mean, I must say. Pseudo-civilised man, that anomalous creature who has been not inaptly defined “an animal ashamed of his own body,” may take it ill that I speak simply: I cannot help that.

A foreign princess, travelling towards Madrid to become queen of Spain, passed through a little town of the peninsula, famous for its manufactories of gloves and stockings. The magistrates of the place, eager to evince their loyalty to their new queen, presented her, on her arrival, with a sample of those commodities for which their town was most remarkable. The major domo, who conducted the princess, received the gloves very graciously; but, when the stockings were presented, he flung them away with great indignation, and severely reprimanded the magistrates for this egregious piece of indecency, “Know,” said he, “that a queen of Spain has no legs.”*

I never could sympathise with this major-domo delicacy; and if you can, my reader, you had better throw this pamphlet aside at once.

* See “Memoires de la Cour d’Espagne,” by Madame d’Aunoy.

If you have travelled and observed much, you will already have learnt the distinction between real and artificial propriety. If you have been in Constantinople, you probably know, that when any one of the grand seignor's wives is ill, the physician is allowed only to see her wrist, which is thrust through an opening in the side of the room; because it is improper even for a physician to look upon another man's wife; and it is thought better to sacrifice health than propriety.*

If you have sojourned among the inhabitants of Turcomania, you know, that they consider a woman's virtue sacrificed for ever, if, before marriage, she be seen to stop on the public road to speak to her lover;† and if you have read Buckingham's travels, you may remember a very romantic story, in which a young Turcoman lady, having thus forfeited her reputation, is left for dead on the road by her brothers, who were determined their sister should not survive her dishonor.

Perhaps you may have travelled in Asia. If so, you cannot be ignorant how grossly indecorous to Asiatic ears it is, to inquire of a husband after his wife's health; and probably you may know, that men have lost their lives to atone for such an impropriety. You know, too, of course, that in Eastern nations it is indecent for a woman to uncover her face; but perhaps you may not know, unless your travels have extended to Abyssinia, that there the indecency consists in uncovering the feet.‡

In Central Africa, you may have seen women bathing in public, without the slightest sense of impropriety; but you were doubtless told, that men could not be permitted a similar liberty; seeing that modesty requires they should perform their ablutions in private.

If my reader has seen all or any of these countries and customs, I doubt not that he or she will read my little book understandingly; and interpret it in the purity which springs from enlarged and enlightened views; or, indeed, from common sense. If not—if you who now peruse these lines have been educated at home, and have never passed the boundary line of your own nation—perhaps of your own village—if you have not learnt that there are other proprieties besides those of your country; and that, after all, genuine modesty has

* See Tournefort's Travels in Turkey.

† See Buckingham's Travels in Asia.

‡ See Bruce's Travels in Abyssinia.

its legitimate seat in the heart, not in the outward form or sanctioned custom—then, I fear me, you may chance to cast these pages from you, as the major domo did the proffered stockings, unconscious that the indelicacy lies, not in my simple words, or the Spanish magistrates' honest offering, but in the pruriently sensitive imagination that discovers impropriety in either. Yet, even though inexperienced, if you be still young and pure-minded, you may read this pamphlet through, and I shall fear from your lips, or in your hearts, no unworthy misconstruction.

Young men and women! you who, if ignorant, are uncorrupted also; you in whose minds honest and simple words call up none but honest and simple ideas; you who think no evil; you who are still believers in human virtue and human happiness; you who, like our fabled first parents in their paradise, are yet unlearned alike in the hypocritical conventionalities and the odious vices of pseudo-civilization; you with whom love is stronger than fear, and the law within the breast more powerful than that in the statute-book; you whose feelings are still unblunted, and whose sympathies still warm and generous; you who belong to the better portion of your species, and who have formed your opinion of mankind from guileless spirits like your own—young men and women! it is to your pure feelings I would speak: it is by your unsophisticated hearts I would fain have my treatise and my motives judged.

Libertines and debauchees! this book is not for you. You are unable to appreciate the subject of which it treats. Bringing to its discussion, as you must, a distrust or contempt of the human race—accustomed, as you unfortunately are, to confound liberty with licence, and pleasure with debauchery, your palled feelings and brutalized senses no longer suffice to distinguish moral truth in its purity and simplicity. I never discuss this subject with such as you; because I esteem it useless, and know it disagreeable, to do so. It has been remarked, that nothing is so suspicious in a woman as vehement pretensions to especial chastity: it is no less true, that the most obtrusive and sensitive stickler for the etiquette of orthodox morality is the heartless rake. The little intercourse I have had with men of your stamp, warns me to avoid the discussion of any species of moral heresy with you. You approach such subjects in a tone and spirit revolting alike to good taste and good feeling. You seem to presuppose—from your own experience, perhaps—that the hearts of all men, and more especially of all women, are

deceitful above all things and desperately wicked; that violence and vice are inherent in human nature, and that nothing but laws and ceremonies prevent the world from becoming a vast slaughter-house or a universal brothel. You are led to judge your own sex and the other by the specimens you have met with in haunts of mercenary profligacy; and, with such a standard in your minds, I marvel not that you remain incorrigible unbelievers in any virtue, but that which is forced in the prudish hot-bed of ceremonious conformity. You will not trust the natural soil, watered from the free skies and warmed by the life-bringing sun. How should you? you have never seen it produce but weeds and poisons. Libertines and debauchees! cast my book aside! You will find in it nothing to gratify a licentious curiosity; and, if you read it, you will probably only give me credit for motives and impulses like your own.

And you, prudes and hypocrites! you who strain at a gnat and swallow a camel; you whom Jesus likened to whited sepulchres, which without indeed are beautiful, but within are full of all uncleanness; you who affect to blush if the ancle is incidentally mentioned in conversation, or displayed in crossing a stile, but will read indecencies enough, without scruple, in your closets; you who, at dinner, ask to be helped to the bosom of a duck, lest, by mention of the word breast, you call up improper associations; you who have nothing but a head and feet and fingers; you who look demure by daylight, and make appointments only in the dark—you, prudes and hypocrites! I address not. Even if honest in your prudery, your ideas of right and wrong are so artificial and confused, that you are not likely to profit by the present discussion; if dishonest, I desire to have no communication with you.

Reader! if you belong to the class of prudes or libertines, I pray you, follow my argument no farther. My heresies will not suit you. As a prude, you will find them too honest; as a libertine, too temperate. In the former case, you will call me a very shocking person; in the latter, a quiz or a bore.

But if you be honest, upright, pure-minded; if you be unconscious of unworthy motive or selfish passion; if truth be your ambition, and the welfare of our race your object—then approach with me a subject the most important to man's well-being; and approach it, as I do, in a spirit of dispassionate, disinterested, free inquiry. Approach it, resolving to prove all things, and hold fast that which is good. The discussion is one to which it is every man's and every wo-

man's *duty*, (and ought to be every one's *business*,) to attend. The welfare of the present generation, and—yet far more—of the next, requires it; common sense sanctions it; and the national motto of my former country, “*Honi soit qui mal y pense*,”* may explain the spirit in which it is undertaken, and in which it ought to be received.

Reader! it ought to concern you nothing who or what I am, who now address you. Truth is truth, if it fall from Satan's lips; and error ought to be rejected, though preached by an angel from heaven. Even as an anonymous work, therefore, this treatise ought to obtain a full and candid examination from you. But, that you may not imagine I am ashamed of honestly discussing a subject so useful and important, I have given you my name on the title page.

Neither is it any concern of yours what my character is, or has been. No man of sense or modesty unnecessarily obtrudes personalities that regard himself, on the public. And, most assuredly, it is neither to gratify your curiosity nor my vanity, if I now do violence to my feelings, and speak a few words touching myself. I do so, to disarm, if I can, prejudice of her sting, thus obtaining the ears of the prejudiced; and to acquaint my readers, that they are conversing with one whom circumstance and education have happily preserved from habits of excess and associations of profligacy.

All those who have known the life and private habits of the writer of this little treatise, will bear him witness, that what he now states is true, to the letter. He was indebted to his parents for habits of the strictest temperance—some would call it, abstemiousness—in *all* things. He never, at any time, habitually used ardent spirits, wine, or strong drink of any kind: latterly, he has not even used animal food. He never entered a brothel in his life; nor associated, even for an evening, with those poor, unhappy victims, whom the brutal, yet tolerated vices of men, or their own unsuspecting or ungoverned feelings, have betrayed to misery and

* One of the English kings, Edward III., in the year 1344, picked up from the floor of a ball-room, an embroidered garter belonging to a lady of rank. In returning it to her, he checked the rising smile of his courtiers with the words, “*Honi soit qui mal y pense!*” or, paraphrased in English, “Shame on him who invidiously interprets it!” The sentiment has become the motto of the English national arms. It is one which might be not inaptly nor unfrequently applied in rebuking the mawkish, skin-deep, and intolerant morality of this hypocritical and profligate age.

degradation. He never sought the company but of the intellectual and self-respecting of the other sex, and has no associations connected with the name of woman, but those of esteem and respectful affection. To this day, he is even girlishly sensitive to the coarse and ribald jests in which young men think it witty to indulge at the expense of a sex they cannot appreciate. The confidence with which women may have honored him, he has never selfishly abused; and, at this moment, he has not a single wrong with which to reproach himself towards a sex, which he considers the equal of man in all the essentials of character, and his superior in generous disinterestedness and moral worth.

I check my pen. I have said enough, perhaps, to awaken the confidence of those whose confidence I value; enough, assuredly to excite the ridicule, or the sneer, of him who walks through life wrapped up in the cloak of conformity, and laughs, among his private boon companions, at the scruples of every novice, who will not, like himself, regard debauchery and seduction (in secret) as manly and spirited amusements.

And now, reader! if I have succeeded in awakening your attention, and enlisting in this inquiry your reason and your better feelings, approach with me a subject the most interesting and important to you, to me, to all our fellow-creatures. If you be a woman, forget that I am a man: if a man, listen to me as you would to a brother. Let us converse, not as men, nor as women, but as human beings, with common interests, instincts, wants, weaknesses. Let us converse, if it be possible, without prejudice and without passion. Whatever be your sex, sect, rank, or party, to you I address the poet's exhortation—here, far more strictly applicable, than in the investigation to which he applied it:—

“Retire! the world shut out: thy thoughts call home;
Imagination's airy wing repress;
Lock up thy senses; let no passion stir;
Wake all to reason: let her reign alone.”

CHAPTER II.

STATEMENT OF THE SUBJECT.

AMONG the various instincts which contribute to man's preservation and well-being, the instinct of reproduction holds a distinguished rank. It peoples the earth; it perpetuates the species. Controlled by reason and chastened by good feeling, it gives to social intercourse much of its charm and zest. Directed by selfishness, or governed by force, it is prolific of misery and degradation. Whether wisely or unwisely directed, its influence is that of a master principle, that colors, brightly or darkly, much of the destiny of man.

It is sometimes spoken of as a low and selfish propensity; and the Shakers call it a "carnal and sensual passion."* I see nothing in the instinct itself that merits such epithets. Like other instincts, it may assume a selfish, mercenary, or brutal character. But, in itself, it appears to me the most social and least selfish of all our instincts. It fits us to give, even while receiving, pleasure; and, among cultivated beings, the former power is ever more highly valued than the latter. Not one of our instincts affords larger scope for the exercise of disinterestedness, or fitter play for the best moral sentiments of our race. Not one gives birth to relations more gentle, more humanizing and endearing; not one lies more immediately at the root of the kindest charities and most generous impulses that honor and bless human nature. Its very power, indeed, gives fatal force to its aberrations; even as the waters of the calmest river, when dammed up or forced from their bed, flood and ruin the country: but the gentle flow and fertilising influence of the stream are the fit emblems of the instinct, when suffered, undisturbed by force or passion, to follow its own quiet channel.

That such an instinct should be thought and spoken of as a low, selfish propensity, and, as such, that the discussion of its nature and consequences should be almost interdicted among human beings, is to me a proof of the profligacy of the age, and the impurity of the pseudo-civilized mind. I imagine, that if all men and women were gluttons

* See "A brief Exposition of the Principles of the United Society called Shakers," published by Calvin Green and Seth Y. Wells, Albany, N. Y., 1830.

and drunkards, they would, in like manner, be ashamed to speak of diet or temperance.

Were I an optimist, and had I accustomed myself to judge and to admire the arrangements of nature, I should be inclined to put forward, as one of the most admirable, the arrangement according to which the temperate fulfilment of the dictates of this, as of almost all other instincts, confers pleasure. The desire of offspring would probably induce us to perpetuate the species, though no gratification were connected with the act. In the language of the optimist, then, "pleasure is gratuitously superadded." But, instead of pausing to admire arrangements and intentions, the great whole of which human reason seems little fitted to appreciate or comprehend, I content myself with remarking, that this very circumstance (in itself surely a fortunate one, inasmuch as it adds another to the sources of human happiness) has often been the cause of misery; and, from a blessing, has been perverted into a curse. Enjoyment has led to excess, and sometimes to tyranny and barbarous injustice.

Were the reproductive instinct disconnected from pleasure of any kind, it would neither afford enjoyment nor admit of abuse. As it is, the instinct is susceptible of either: just as wisdom or ignorance governs human laws, habits and customs. It behooves us, therefore, to be especially careful in its regulation, lest what is a great good may become a great evil.

This instinct, then, may be regarded in a two-fold light; *first*, as giving the power of reproduction; *second*, as affording pleasure.

And here, before I proceed, let me call to the reader's mind, that it is the province of rational beings to bear UTILITY strictly in view. Reason recognises the romantic and un-earthly reveries of Stoicism, as little as she does the doctrines of health-destroying and mind-debasing debauchery. She reprobates equally a contemning and an abusing of pleasure. She bids us avoid asceticism on the one hand, and excess on the other. In all our inquiries, then, let reason guide us, and let UTILITY be our polar star.

I have often had long arguments with my friends, the Shakers,* touching the two-fold light in which the reproduc-

* I call them my friends, because, however little I am disposed to accede to their peculiar principles, I have met, from among their body, a great proportion of individuals who have taken with them my friendship and sympathy.

tive instinct may be regarded. They commonly stand out stoutly against the propriety of considering it except simply as a means of perpetuating the species ; and they deny that it may be regarded as a legitimate source of enjoyment. In this I totally dissent from them. It is a much more noble, because less purely selfish, instinct, than hunger or thirst ; and, though it differ from hunger and thirst in this, that it may remain ungratified without causing death, I have yet to learn, that because it is *possible*, it is therefore also *desirable*, to mortify and repress it. I admit, to the Shakers, that in the world, profligate and hypocritical as we see it, this instinct is the source of much misery ; and that if I had to choose between the life of the profligate man of the world and that of the ascetic Shaker, I should not hesitate a moment to prefer the latter. But, for admitting that the most social and kindly of human instincts is sensual and degrading in itself, I cannot. I think its influence moral, humanising, polishing, beneficent ; and that the social and physical education of no man or woman is fully completed without it. Its mortification (though far less injurious than its excess) is very mischievous. If it do not give birth to peevishness, or melancholy, or incipient disease, or unnatural practices, at least it almost always freezes and stiffens the character ; checking the flow of its kindest emotions, and not unfrequently giving to it a solitary, anti-social, selfish stamp.

I deny the position of the Shaker, then, that the indulgence of the instinct is justifiable (if, indeed, it be justifiable at all) only as necessary to the reproduction of the species. It is justifiable, in my view, just in as far as it makes man a happier and a better being. It is justifiable, both as a source of temperate enjoyment, and as a means by which the sexes mutually polish and improve each other.

If a Shaker has read my little book thus far, and cannot reconcile his mind to this idea, he may as well close it at once. I found all my arguments on the position, that the pleasure derived from this instinct, independent of and totally distinct from its ultimate object, the reproduction of our race, is good, proper, worth securing and enjoying. I maintain, that its temperate enjoyment is a blessing, both in itself and in its influence on human character.

Upon this distinction of the instinct into its two-fold character, rests the present discussion. It sometimes happens, nay, it happens every day and hour, that mankind obey its dictates, not from any calculation of consequences, but simply from animal impulse. Thus many children who are

brought into the world owe their existence, not to deliberate conviction in their parents that their birth is desirable, but simply to an unreasoning instinct, which men, in the mass, have not learnt either to resist or control.

It is a serious question—and surely an exceedingly proper and important one—whether man can obtain, and whether he is benefitted by obtaining, control over this instinct. IS IT DESIRABLE THAT IT SHOULD NEVER BE GRATIFIED WITHOUT AN INCREASE TO POPULATION? OR, IS IT DESIRABLE, THAT, IN GRATIFYING IT, MAN SHALL BE ABLE TO SAY WHETHER OFFSPRING SHALL BE THE RESULT OR NOT?

To answer the questions satisfactorily, it would be necessary to substantiate, that such control may be obtained without injury to the physical health, or violence to the moral feelings; and also, that it may be obtained without any real sacrifice of enjoyment; or, if that cannot be, with as little as possible.

This is the plain statement of the subject. It resolves itself into two distinct heads: first, the *desirability* of such control, and, secondly, its *possibility*.

In examining its desirability, we enter a wide field, a field often traversed by political economists, by moralists, and by philosophers, though generally, it will be confessed, to little purpose. This may be, in a great measure, attributed rather to their fear than their ignorance. The world would not permit them to say what they knew. I intend that my readers shall know all that I know on the subject; for I have ceased to ask the world's leave to say what I think and what I believe to be useful to the public.

I propose to consider the question in the abstract, and then to examine it in its political and social bearings.

CHAPTER III.

THE QUESTION EXAMINED IN THE ABSTRACT.

Is it in itself desirable, that man should obtain control over the instinct of reproduction, so as to determine when its gratification shall produce offspring, and when it shall not?

But that men have not accustomed themselves to free and dispassionate reflection, and that the various superstitious

of the nursery pervade the opinions and cramp the inquiries of after-life;—but for this, the very statement of the question might suffice to obtain for it the assent of every rational being. Nothing so elevates a man above the brute creation, as the due control of his instincts. The lower animal follows them blindly, unreflectingly. The serpent gorges himself; the bull fights, even to death, with his rival of the pasture: the dog makes deadly war for a bone. They know nothing of progressive improvement. The elephant or the beaver of the nineteenth century, are just as wise and no wiser, than the elephant or the beaver of two thousand years ago. Man alone has the power to improve, to cultivate, to elevate his nature, from generation to generation. He alone can control his instincts by reflection of consequences, and regulate his passions by the precepts of wisdom.

It is strange, that even at this period of the world, we should have to remind each other, that *all* knowledge of facts is useful; or, at the least, that it cannot be injurious. The knowledge of some facts may be unimportant; the knowledge of none is mischievous. A human being is a puppet, a slave, if his ignorance is to be the safeguard of his virtue. Nor shall we know where to stop, if we follow up this principle. Shall we give our sons lessons in mechanics? but they may thereby learn to pick locks. Shall we teach them to read? but they may thus obtain access to falsehood and folly. Shall we instruct them in writing? but they may become forgers.

Such, in effect, was the reasoning of men in the dark ages. When Walter Scott puts in the mouth of Lord Douglas, on the discovery of Marmion's treachery, the following exclamation, it is strictly in accordance with the spirit and prevailing opinions of the times:

“ A letter forged ! Saint Jude to speed
Did ever knight so foul a deed !
At first in heart it liked me ill,
When the king praised his clerkly skill.
Thanks to Saint Bothan, son of mine,
Save Gawain, ne'er could pen a line
So swore I, and so swear I still,
Let my boy bishop fret his fill.”

The days are gone by when ignorance can be the safeguard of virtue. The *only* rock-foundation for virtue is knowledge. There is *no* fact, in physics or in morals; that ought to be concealed from the inquiring mind. Let that parent who

thinks to secure his sons' honesty or his daughters' innocence by keeping back from them facts—let that parent know, that he is building up their morality on a sandy foundation. The rains and the floods of the world's influence shall beat upon that virtue, and great shall be the fall thereof.

If, then, man can obtain control over this most important of instincts, it is, *in principle*, right that he should know it. If men, after obtaining such knowledge, think fit not to use it; if they deem it nobler and more virtuous, to follow each animal impulse, like the beasts of the field and the fowls of the air, without a thought of its consequences, or an inquiry into its nature—let them do so. The knowledge that they have the power to act more like rational beings will not injure, if it fail to benefit, them. They may set it aside, may neglect it, may forget it, if they can. Only let them show common sense enough to permit that others, who are more slow to incur sacred responsibilities, and more willing to give reason the control of instinct, should obtain the requisite knowledge, and follow out their prudent resolutions.

If this little book were in the hands of every adult in the United States, not one need profit by it, unless he saw fit. Nor will any man admit that he can possibly be injured by it. Oh no! *His* virtue can bear any quantity of light. But then, his neighbour's, or his son's, or his daughter's!

This would lead me to discuss the *social bearings* of the question. But, as conceiving it more in order, I shall first speak of it in connexion with political economy.

CHAPTER IV.

THE QUESTION IN ITS CONNEXION WITH POLITICAL ECONOMY.

THE population question, as it is called, has of late years occupied much attention, especially in Great Britain. It was first prominently brought forward and discussed there in the year 1798, by Malthus, an English clergyman. Godwin, Ricardo, Place, Mill, Thompson, Robert Owen, and other celebrated cotemporary writers, have all discussed it, with more or less reserve, and at greater or less length.

Malthus' work has become the text book of a large politico-economist party in England. His doctrine is that

“population, unrestrained, will advance beyond the means of subsistence.” He asserts, that, in most countries, population at this moment presses against the means of subsistence; and that, in all countries, it has a tendency so to do. He recommends, as a preventive of the growing evil, celibacy till a late age, say thirty years; and he asserts, that unless this “moral restraint” be exerted, vice, poverty and misery must continue to be the checks to population. The tendency of such principles appears to me very mischievous; though, upon the whole, the work of Mr. Malthus, by provoking inquiry, will, I doubt not, prove a source of good. I have heard some of his disciples openly declare, that they considered the crimes and wretchedness of society to be *necessary*—to be the express ordainings of Providence intended to prevent the earth from being overpeopled. I have heard it argued by men of rank, wealth and influence, that the distinctions of rich and poor, and even of morality and immorality, of luxury and want, will and must exist to the end of the world; that he who attempts to remove them fights against God and nature; and, if he partially succeed, will but afford the human race an opportunity to increase, until the earth shall no longer suffice to contain them, and men shall be compelled to prey on each other. It must be confessed, that this is a comfortable doctrine for the rich idler; it is a healing salve to the luxurious conscience; an opiate to drown the still small voice of truth and humanity, which calls to every man to be up and do his part towards the alleviation of the human suffering that everywhere stares him in the face.*

It is vain to argue with the defenders of the evils that be, that, for the present, there is land and every other necessary in abundance for all, if there were wisdom in the distribution; and that the day of ultimate overstocking is afar off. They tell you, that day must come at last; and that the more you do to remove vice and misery—those destroyers of population—the sooner it will come. And what reply can one make to the argument in the abstract? I believe it to be true, that population, unrestrained,† will double itself on an

* Let me not be understood as charging on Mr. Malthus himself a style of reasoning he disclaims. I do but remind the reader how easily weak or selfish men may pervert his doctrine to mischievous purposes.

† By *unrestrained*, Malthus and his disciples mean, not restricted or destroyed by any incidental check whatever, moral or immoral, prudential or violent. Thus, poverty, war, libertinism, famine, &c. are all checks to population. In this sense, and not simply as applying to preventive moral restraint, have I employed the word throughout this chapter.

average every twenty-five to fifty years. If so, it is evident to a demonstration, that, if population were not restrained, morally or immorally, the earth would *at last* furnish scarcely foothold for the human beings produced.

Take the least rapid of the above rates of increase, and say, that population, unrestrained, will double itself every *fifty* years. That it has done so, (without reckoning the increase from emigration,) in many parts of this continent is certain.

Then, if we suppose the present numerous checks to population, viz. want, war, vice, and misery, removed by rational reform, and if we assume the present population of the world at one thousand millions, we shall find the rate of increase as follows:—At the end of

100 years, there would be four thousand millions.

200 ————— sixteen thousand millions.

300 ————— sixty-four thousand millions.

400 ————— two hundred and fifty-six thousand millions.

And so on, multiplying by 4 for every hundred years. So that, in 500 years, if we imagine unchecked increase, there would be more than *a thousand times* as many as at present; and in 1,000 years, upwards of *a million times* as many human beings as at this moment.

It is evident, then, to demonstration, that there is not space on this earth for population, under any circumstances, to increase unrestrained, during more than a very few hundred years. We are thus compelled to admit to Malthus, that, *sooner or later*, some restraint or other to population *must* be employed; and compelled to admit to his aristocratic expounders, that if no other better restraint than vice and misery can be found, then *vice and misery must be*; they are the lot of man, from generation to generation.

Let me repeat it: it is no question—never can be a question—whether there shall be a restraint to population or not. There *MUST* be; unless indeed we imagine communication opened with other planets, so that we may people them. In the nature of things, there must be a check, of some kind. The only question is, what that check shall be—whether, as heretofore, the check of war, want, profligacy, misery; or a “moral restraint,” suggested by experience and sanctioned by reason.

Let those, then, who cry out against this little treatise, be told, that though they may postpone the question, no human power can evade it. It must come up. Had the friends of reform been left to choose their own time it might, perhaps

with advantage, have been postponed. And it is an imaginable case, that prejudice might delay it until a general famine or a universal civil war became the frightful checks. But will any man of common sense argue the propriety of suffering such a crisis to approach?

Malthus saw this. He saw that some check must exist; and, whatever some of his disciples might say, he did not intend to be considered the apologist of vice and misery. His theory, indeed, supplied specious arguments to those who assert, with the ingenious author of the *Fable of the Bees*,* that "private vices are public benefits;" and furnished a comfortable excuse for supine contentment with a vicious and degrading order of things. But Malthus himself declares the only proper check to be, the general practice of celibacy to a late age. He employs all his eloquence to persuade men and women that they ought not to marry till they are twenty-eight or thirty years of age; and that, if they do, they are contributing to the misery of the world.

Now, Mr. Malthus may preach for ever on this subject. Individuals may indeed be found, who will look to distant consequences, and sacrifice present enjoyment; even as individuals are found to become and remain Shaking Quakers: but to believe that the mass of mankind will abjure, through the ten fairest years of life, the nearest and dearest of social relations; and during the very holiday of existence, will live the life of monks and nuns—all to atone for a mal-administration of the earth's resources, or to avert an ultimate catastrophe which is confessedly some hundreds of years distant—to believe this, requires a faith, which no accurate observer of mankind possesses.

This weak point the aristocratic expounders of Malthus' doctrines were not slow to discover. They broadly asserted, that such "moral restraint" would never be generally practised. They asked, whether a young woman, to whom a comfortable home and a pleasant companion were offered, would refuse to accept them, on this theory of population; whether a young man who had a fair (or even but a very indifferent) prospect of maintaining a family, would doom himself to celibacy, lest the world should be overpeopled. And they put it to the advocates of late marriages, whether, in one sex at least, the recommendation, if even nominally followed, would not almost certainly lead to vicious excess

and degrading associations ; thus resolving the check at last into vice and misery. As experience answers these questions in the negative, is it not clear, (they proceeded exultingly to ask,) that vice and misery are the natural lot of man ; and that it is quixotic, if not impious, to plague ourselves about them, or to attempt, by their suppression, to controvert the decrees of God ?

It was very easy for generous feelings to reply to so heartless an argument. It was easy to ask, whether even the apparent hopelessness of the case formed any legitimate apology for supine indifference ; or whether, where we cannot cure, we are absolved from the duty of alleviating. But it was not very easy fully and fairly to meet the whole question. It was idle to deny that preaching would not put off marriage for ten years : and if no other species of moral restraint than ten years Shakerism could be proposed, it did appear evident enough, that moral restraint would be by the mass neglected, and that the physical checks of vice and misery must come into play at last.

I pray my readers, then, distinctly to observe how the matter stands. Population, unrestrained, *must* increase beyond the possibility of the earth and its produce to support. At present *it is restrained by vice and misery*. The only remedy which the orthodoxy of the English clergyman permits him to propose, is, late marriages. The most enlightened observers of mankind are agreed, that nothing contributes so positively and immediately to demoralize a nation, as when its youth refrain, until a late period, from forming disinterested connexions with those of the other sex. The frightful increase of prostitutes, the destruction of health, the rapid spread of intemperance, the ruin of moral feelings, are, to the mass, the *certain* consequences. Individuals there are, who escape the contagion ; individuals whose better feelings revolt, under *any* temptation, from the mercenary embrace, or the Circean cup of intoxication ; but these are exceptions only. The mass will have their pleasures, the pleasures of intellectual intercourse, of unbought affection, and of good taste and good feeling, if they can ; but if they cannot, then such pleasures (alas ! that language should be perverted to entitle them to the name !) as the sacrifice of money and the ruin of body and mind can purchase.*

* Lawrence, the ingenious author of the " Empire of the Nairs," says, shrewdly enough : " Wherever the women are prudes, the men will be drunkards."

But this is not all. Not only is Malthus' proposition fraught with immorality, in that it discountenances to a late age those disinterested sexual connexions which can alone save youth from vice; but it is *impracticable*. Men and women will scarcely pause to calculate the chances they have of affording support to their children ere they become parents: how, then, should they stop to calculate the chances of the world's being overpeopled? Mr. Malthus may say what he pleases, they never will make any such calculation; and it is folly to expect they should.

Let us observe, then: *unless some less ascetic and more practicable species of "moral restraint" be introduced*, vice and misery will *ultimately* become the inevitable lot of man. He can no more escape them, than he can the light of the sun, or the stroke of death.

What an incitement, this, to the prosecution of our inquiry! Here is an argument put forth, which is all but an apology for the apathy that prevails among the rich and the powerful—among governors and legislators—in regard to human improvement. How important, how essential for the interests of virtue that it should be refuted! How beneficent that knowledge, which discloses to us some moral practicable check to population, and relieves us from the despairing conclusion, that the irrevocable doom of man is misery, without remedy and without end! In the absence of such knowledge, truly the prospects of the world were dark and cheerless. Philanthropy herself pauses, when she begins to fear that all her exertions are to result in hopeless disappointment. And yet—such is this world—even the ablest opponents of Malthus stop short when they come to the question, and leave an argument unanswered, which a dozen pages might suffice for ever to set at rest.

Let one of the most intelligent of these opponents—a man of sterling talent—let MILL, the well known political economist, and author of "British India," speak for himself:

"What are the best means of checking the progress of population, when it cannot go on unrestrained without producing one or other of two most undesirable effects, either drawing an undue portion of the population to the mere raising of food, or producing poverty and wretchedness, it is not now the time to inquire. *It is, indeed, the most important practical problem to which the wisdom of the politician and the moralist can be applied.* It has, till this time, been miserably evaded by all those who have meddled with the subject, as well as by those who were called on by their situation to find

a remedy for the evils to which it relates. And yet, *if the superstitions of the nursery were disregarded, and the principle of utility kept steadily in view*, a solution might not be very difficult to be found; and the means of drying up one of the most copious sources of human evil—a source which, *if all other sources were taken away, might alone suffice to retain the great mass of human beings in misery*, might be seen to be neither doubtful nor difficult to be applied.”—*Art. COLONY, Encyclopædia Britannica.*

Let my readers bear in mind, that this is from the pen of one of the most admired writers of the present day; a man celebrated throughout Europe, for his works on political economy, and whose writings are not unknown on this side the Atlantic. He considers the question now under discussion to involve “the most important problem to which the wisdom of the politician and moralist can be applied.” This question, he admits, has ever been “miserably evaded.” Yet even a man so influential and clear-sighted as Mill, must himself yield to the weakness he reprobates; must speak in parables, as the Nazarene reformer did before him; and, even while commenting on the “miserable evasion” of a subject so engrossingly important, must imitate the very evasion he despises.*

I will not imitate it. I am more independently situated than was the English economist; and I see, as clearly as he does, the extreme importance of the subject. What he saw and declared *ought* to be said, I will say.

Before concluding this chapter, let me distinctly state an opinion, from which Mr. Malthus himself, if I read his doctrine aright, will hesitate to dissent. I am convinced, that, at this moment, there is nothing approaching to an excess of population, *absolutely* considered, in a single country of Europe. Iniquitous laws, false education, and a vicious order of things, are continually producing effects, which are erroneously attributed to over-population; effects which spring, not from the number, but from the ignorance, of men. Monopolies favour the rich, imposts oppress the poor, commercial rivalry grinds to the dust the victims of an overgrown system of competition. To such causes as these, and not to *positive* excess of people, at the time being, is the distress, more or less felt over the civilized world, to be attributed. Still, it is undeniable that the most perfect system of

* I speak here, as regretting the circumstance, not as censuring the individual. It is probable, that had Mr. Mill spoken more plainly, his essay would have been refused admission into the *Encyclopædia*.

political or social economy in the world could not, of itself prevent the *ultimate* evils of superabundant population. And, it is no less certain, that, in the meantime, the pressure of a large family on the labouring man greatly augments his difficulties, and often deprives him of that leisure which he might employ in devising means to better his condition, instead of leaving public business in the hands of political gamblers.

Vice-bringing laws and customs ought to be—*must* be changed; but while the grass is growing, let us prevent the horse from starving, if we can

Thus (and I am desirous it be distinctly understood) a solution of the population question is here offered, as an *alleviation* of existing evils, not as a *cure* for them; as a palliative, not as a remedy, for the national disease. Population might be but a tenth part of what it is, and unjust legislation and vicious customs would still give birth, as they now do, to extravagance and want. It is true, and ought to be remembered, that the check I propose, by diminishing the number of laborers, will render labor more scarce and consequently of higher value in the market; and in this view, its political importance is considerable: but it may also be doubted whether our present overgrown system of commercial competition be not hurrying the laborer towards the lowest rate of wages, capable of sustaining life, too rapidly to be overtaken, except in individual cases, even by a prudential check to population. I do not, then, expect political wonders from my little work. Economy in living is, like the parental foresight of which I speak, in itself an excellent thing, and ought to be recommended to all; but he who expects, by the one recommendation or the other, to *eradicate* the ills of poverty, expects an effect from inadequate causes. The root of the evil lies far deeper than this; and its remedy must be of a more radical nature. This is not the place, however, to enter on such a discussion. The great importance of the present work I conceive to lie more in its *moral and social*, than in its *political*, bearings. It is addressed to each individual, rather as the member of a family, than the citizen of a state.

Enough has been said, probably, in this chapter, to determine the question, whether it is, or is not, *desirable*, in a political point of view, that some check to population be sought and disclosed—some “moral restraint” that shall not, like vice and misery, be demoralizing, nor, like late marriages, be ascetic and impracticable.

CHAPTER V.

THE QUESTION CONSIDERED IN ITS SOCIAL BEARINGS.

THIS is by far the most important branch of the question. The evils caused by an absolute overstocking of the world, if inevitable, are distant; and an abstract statement of the subject, however unanswerable, does not come home to the mind with the force of detailed reality.

What would be the probable effect, in social life, if mankind obtained and exercised a control over the instinct of reproduction?

My settled conviction is—and I am prepared to defend it—that the effect would be salutary, moral, civilising; that it would prevent many crimes and more unhappiness; that it would lessen intemperance and profligacy; that it would polish the manners and improve the moral feelings; that it would alleviate the burden of the poor, and the cares of the rich; that it would most essentially benefit the rising generation, by enabling parents generally more carefully to educate, and more comfortably to provide for, their offspring. I proceed to substantiate these positions.

And first, let us look solely to the situation of married persons. Is it not notorious, that their families often increase beyond what a regard for the young beings coming into the world, or the happiness of those who give them birth, would dictate? In how many instances does the hard-working father, and more especially the mother, of a poor family, remain slaves throughout their lives, tugging at the oar of incessant labor, toiling to live, and living only to die; when, if their offspring had been limited to two or three, they might have enjoyed comfort and comparative affluence! How often is the health of the mother, giving birth every year, perchance, to an infant—happy, if it be not twins!—and compelled to toil on, even at those times when nature imperiously calls for some relief from daily drudgery—how often is the mother's comfort, health, nay, her life, thus sacrificed! Or, when care and toil have weighed down the spirit, and at last broken the health of the father, how often is the widow left, unable, with the most virtuous intentions, to save her fatherless offspring from becoming degraded objects of charity, or profligate votaries of vice!

Fathers and mothers! not you who have your nursery and

your nursery maids, and who leave your children at home to frequent the crowded rout, or to glitter in the hot ball-room; but you, by the labor of whose hands your children are to live, and who, as you count their rising numbers, sigh to think how soon sickness or misfortune may lessen those wages, which are now but just sufficient to afford them bread—fathers and mothers in humble life! to you my argument comes home, with the force of reality. Others may impugn—may ridicule it. By bitter experience you know and feel its truth.

It will be said, that the state ought to provide for the efficient guardianship and education of all the children of the land. No one is less inclined to deny the position than I. But it *does* not provide for these. And if it did, a period must come at last, when even such an act of justice would be no relief from the evils of over-population.

Yet this is not all. Every physician knows, that there are many women so constituted that they cannot give birth to healthy—sometimes not to *living* children. Is it desirable—is it *moral*, that such women should become pregnant? Yet this is continually the case, the warnings of physicians to the contrary notwithstanding. Others there are, who ought never to become parents; because, in so doing, they transmit to their offspring grievous hereditary diseases; perhaps that worst of diseases, insanity. Yet they will not lead a life of celibacy. They marry. They become parents, and the world suffers by it. That a human being should give birth to a child, knowing that he transmits to it hereditary disease, is, in my opinion, an immorality. But it is a folly to expect that we can ever induce all such persons to live the lives of Shakers. Nor is it necessary. All that duty requires of them is, to refrain from becoming parents. Who can estimate the beneficial effect which rational, moral restraint may thus have on the physical improvement of our race, throughout future ages! Were such virtue as this generally cultivated, how soon might the very seeds of disease die out among us, instead of bearing, as now, their poison-fruit, from generation to generation! and how far might human beings, in succeeding times, surpass their forefathers in health, in strength and in beauty!

This view of the subject is, to the physiologist, to the philosopher, to every friend of human improvement, a most interesting one. “So long” to use the words of an eloquent lecturer, now in this city,* “as the tainted stream is unhesi-

* Mr. Graham, whose excellent discourses on temperance have excited

tatingly transmitted through the channel of nature, from parent to offspring, so long will the text be verified which 'visits the sins of the fathers on the children, even to the third and fourth generations.' " And so long, I would add, will mankind (wise and successful whenever there is question of improving the animal races) be blind in perceiving, and listless in securing, that far nobler object, the physical, and thereby (in a measure) the mental and moral improvement of our own.

I may seem an enthusiast—but so let me seem then,—when I express my conviction, that there is not greater physical disparity between the dullest, shaggiest race of dwarf draught horses, and the fiery-spirited and silken-haired Arabian, than between man degenerate as he is, and man perfected as he might be: and though mental cultivation in this counts for much, yet organic melioration is an influential—an *indispensable* accessory.

But, apart from these latter considerations, is it not most plainly, clearly, incontrovertibly *desirable*, that parents should *have the power** to limit their offspring, whether they choose to exercise it or not? Who *can* lose by their having this power? and how many *may* gain! may gain competency for themselves, and the opportunity carefully to educate and provide for their children! How many may escape the jar-rings, the quarrels, the disorder, the anxiety, which an overgrown family too often causes in the domestic circle!

It sometimes happens that individual instances come home to the feelings with greater force than any general reasoning. I shall, in this place, adduce one which came immediately under my cognizance.

In June, 1829, I received from an elderly gentleman of the first respectability, occupying a public situation in one of the western states, a letter, requesting to know whether I could afford any information or advice in a case which greatly interested him, and which regarded a young woman for whom he had ever experienced the sentiments of a father.

so much interest, and made so many converts, lately, in New York, Philadelphia, and other cities of the Union.

* It may possibly be argued, that all married persons have this power already; seeing that they are no more obliged to become parents than the unmarried; they may live as the brethren and sisters among the Shakers do. But this Shaker remedy is, as every one knows, utterly impracticable as a general rule; and it would chill and embitter domestic life, even if were practicable.

In explanation of the circumstances he enclosed me a copy of a letter which she had just written to him, and which I here transcribe verbatim. A letter more touching from its simplicity, or more strikingly illustrative of the unfortunate situation in which not one, but thousands, in married life, find themselves placed, I have never read.

“ Dear Sir, *L * * * Kentucky, May 3, 1829.*

“ The friendship which has existed between you and my father, ever since I can remember ; the unaffected kindness you used to express towards me when you resided in our neighbourhood, during my childhood ; the lively solicitude you have always seemed to feel for my welfare, and your benevolent and liberal character, induce me to lay before you, in a few words, my critical situation, and ask for your kind advice.

“ It is my lot to be united in wedlock to a young mechanic of industrious habits, good dispositions, pleasing manners, and agreeable features, excessively fond of our children and of me ; in short, eminently well qualified to render himself and family and all around him happy, were it not for the besetting sin of drunkenness. About once in every three or four weeks, if he meet, either accidentally, or purposely, with some of his friends, of whom, either real or pretended, his good nature and liberality procure him many, he is sure to get intoxicated, so as to lose his reason ; and, when thus beside himself, he trades and makes foolish bargains, so much to his disadvantage, that he has almost reduced himself and family to beggary, being no longer able to keep a shop of his own, but obliged to work journey work.

“ We have not been married quite four years, and have already given being to three dear little ones. Under present circumstances what can I expect will be their fate and mine ? I shudder at the prospect before me. With my excellent constitution and industry, and the labor of my husband, I feel able to bring up these three little cherubs in decency, were I to have no more : but when I seriously consider my situation, I can see no other alternative left for me, than to tear myself away from the man who, though addicted to occasional intoxication, would sacrifice his life for my sake ; and for whom, contrary to my father’s will, I successively refused the hand and wealth of a lawyer and of a preacher ; or continue to witness his degradation, and bring into existence, in all probability, a numerous family of helpless and destitute children who, on account of poverty, must inevitably be doomed to a life of ignorance, and consequent vice and misery.

"The dreadful sentence pronounced against me by my father for my disobedience, forbids me applying to him, either for advice or anything else. My husband being somewhat sceptical, my father attributes his intemperance to his infidelity; though my brother, as you know, being a member of the same church with my father, is, nevertheless, though he does not fool away his property, more of a drunkard than my husband, and ranks among the faithful. You will therefore plainly see, that for these and other reasons, I stand the more in need of your friendly advice; and I do hope, and believe you will give me such advice and counsel as you would to your own daughter, had you one in the same predicament that I am. In so doing, you will add new claims to the gratitude of your friend,

M. W."

Need I add one word of comment on such a case as this? Every one must be touched with the amiable feeling and good sense that pervade the letter. Every rational being, surely, must admit, that the power of preventing, without injury or sacrifice, the increase of a family, under such circumstances, is a public benefit and a private blessing.

Will it be asserted—and I know no other even plausible reply to these facts and arguments—will it be asserted, that the thing is, in itself, immoral or unseemly? I deny it; and I point to France, in justification of my denial. Where will you find, on the face of the globe, a more polished, or more civilised nation than the French, or one more punctiliously alive to any rudeness, coarseness, or indecorum? You will find none. The French are scrupulous on these points, to a proverb. Yet, as every intelligent traveller in France must have remarked, there is scarcely to be found, among the middle or upper classes, (and seldom even among the working classes,) a large family; seldom more than three or four children. A French lady of the utmost delicacy and respectability will, in common conversation, say as simply—(ay, and as *innocently*, whatever the self-righteous prude may aver to the contrary) as she would proffer any common remark about the weather: "I have three children; my husband and I think that is as many as we can do justice to, and I do not intend to have any more."*

I have stated notorious facts, facts which no traveller who has visited Paris, and been admitted to the domestic life of

* Will our sensitive fine ladies blush at the plain good sense and simplicity of such an observation? Let me tell them, the indelicacy is in their own minds, not in the words of the French mother.

its inhabitants, will attempt to deny. However heterodox, then, my view of the subject may be in this country, I am supported in it by the opinion and the practice of one of the most refined and most socially cultivated nations in the world.

Will it still be argued, that the practice, if not coarse, is immoral? Again I appeal to France. I appeal to the details of the late glorious revolution—to the innumerable instances of moderation, of courage, of honesty, of disinterestedness, of generosity, of magnanimity, displayed on the memorable “three days,” and ever since; and I challenge comparison between the national character of modern France for virtue, as well as politeness, and that of any other nation under heaven.

It is evident, then, that, to married persons, the power of limiting their offspring to their circumstances is most desirable. It may often promote the harmony, peace, and comfort of families; sometimes it may save from bankruptcy and ruin, and sometimes it may rescue the mother from premature death. In no case can it, by possibility, be worse than superfluous. *In no case can it be mischievous.*

If the moral feelings were carefully cultivated, if we were taught to consult, in every thing, rather the welfare of those we love than our own, how strongly would these arguments be felt! No man ought even to *desire* that a woman should become the mother of his children, unless it was her express wish, and unless he knew it to be for her welfare, that she should. Her feelings, her interests, should be for him in this matter *an imperative law*. She it is who bears the burden, and therefore with her also should the decision rest. Surely it may well be a question whether it be desirable, or whether any man ought to ask, that the whole life of an intellectual, cultivated woman, should be spent in bearing a family of twelve or fifteen children; to the ruin, perhaps, of her constitution, if not to the overstocking of the world. No man ought to require or expect it.

Shall I be told, that this is the very romance of morality? Alas! that what ought to be a matter of every day practice—a common-place exercise of the duties and charities of life,—a bounden duty—an instance of domestic courtesy too universal either to excite remark or to merit commendation—alas! that a virtue so humble that its absence ought to be reproached as a crime, should, to our selfish perceptions, seem but a fastidious refinement, or a fanciful supererogation!

But I pass from the case of married persons to that of

young men and women who have not yet formed a matrimonial connexion.

In the present state of the world, when public opinion stamps with opprobrium every sexual connexion which has not received the orthodox sanction of an oath, almost all young persons, on reaching the age of maturity, desire to marry. The heart must be very cold, or very isolated, that does not find some object on which to bestow its affections. Early marriages would be almost universal, did not prudential considerations interfere. The young man thinks, "I must not marry yet. I cannot support a family. I must make money first, and think of a matrimonial settlement afterwards."

And so he sets about making money, fully and sincerely resolved, in a few years, to share it with her whom he now loves. But passions are strong, and temptations great. Curiosity, perhaps, introduces him into the company of those poor creatures whom society first reduces to a dependence on the most miserable of mercenary trades, and then curses for being what she has made them. There his health and his moral feelings alike make shipwreck. The affections he had thought to treasure up for their first object, are chilled by dissipation and blunted by excess. He scarcely retains a passion but avarice. Years pass on—years of profligacy and speculation—and his first wish is accomplished; his fortune is made. Where now are the feelings and resolves of his youth?

Like the dew on the mountain,
Like the foam on the river,
Like the bubble on the fountain,
They are gone—and for ever!

He is a man of pleasure—a man of the world. He laughs at the romance of his youth, and marries a fortune. If gaudy equipages and gay parties confer happiness, he is happy. But if these be only the sunshine on the stormy ocean below, he is a victim to that system of morality, which forbids a reputable connexion until the period when provision has been made for a large, expected family. Had he married the first object of his choice, and simply delayed becoming a father until his prospects seemed to warrant it, how different might have been his lot? Until men and women are absolved from the fear of becoming parents, except when they themselves desire it, they will continue to form

mercenary and demoralizing connexions, and seek in dissipation the happiness they might have found in domestic life.

I know that this, however common, is not a universal case. Sometimes the heavy responsibilities of a family are incurred, at all risks; and who shall say how often a life of unremitting toil and poverty is the consequence? Sometimes—if even rarely—the young mind *does* hold to its first resolves. The youth plods through years of cold celibacy and solitary anxiety: happy, if before the best hours of life are gone and its warmest feelings withered, he may return to claim the reward of his forbearance and his industry. But even in this comparatively happy case, shall we count for nothing the years of ascetical sacrifice at which after-happiness is purchased? The days of youth are not too many, nor its affections too lasting. We may, indeed, if a great object require it, sacrifice the one and mortify the other. But is this, in itself, desirable? Does not wisdom tell us, that such sacrifice is a dead loss—to the warm-hearted often a grievous one? Does not wisdom bid us temperately enjoy the spring-time of life, “while the evil days come not, nor the years draw nigh when we shall say, ‘We have no pleasure in them?’”

Let us say, then, if we will, that the youth who thus sacrifices the present for the future, chooses wisely between two evils, profligacy and asceticism. This is true. But let us not imagine the lesser evil to be a good. It is *not* good for man to be alone. It is for no man’s or woman’s happiness or benefit, that they should be condemned to Shakerism. It is a violence done to the feelings, and an injury to the character. A life of rigid celibacy, though greatly preferable to a life of dissipation, is yet fraught with many evils. Peevishness, restlessness, vague longings, and instability of character, are among the least of these. The mind is unsettled, and the judgment warped. Even the very instinct which is thus mortified, assumes an undue importance, and occupies a portion of the thoughts, which does not, of right or nature, belong to it; and which, during a life of satisfied affection, it would not obtain.

I speak not now of extreme cases, where solitary vice* or

* For a vice so unnatural as onanism there could be no temptation, and therefore no existence, were not men and women unnaturally and mischievously situated. It first appeared, probably, in monasteries and convents; and has been perpetuated by the more or less anti-social and demoralizing relation in which the sexes stand to each other, in almost all countries. In estimating the consequences of the

disease, or even insanity, has been the result of ascetical mortification. I speak of every-day cases; and I am well convinced, that, (however wise it often is, in the present state of the world, to select and adhere to this alternative,) yet no man or woman can live the life of a conscientious Shaker, without suffering, more or less, physically, mentally, and morally. This is the more to be regretted, because the very noblest portion of our species—the good, the pure, the high-minded, and the kind-hearted—are the chief victims.

Thus, inasmuch as the scruple of incurring heavy responsibilities deters from forming moral connexions, and encourages intemperance and prostitution, the knowledge which enables man to limit his offspring, would, in the present state of things, save much unhappiness, and prevent many crimes. Young persons sincerely attached to each other, and who might wish to marry, might marry early; merely resolving not to become parents until prudence permitted it. The young man, instead of solitary toil or vulgar dissipation, would enjoy the society and the assistance of her he had chosen as his companion; and the best years of life, whose pleasures never return, would not be squandered in riot or lost through mortification.

If, in virtue of these recommendations, early marriages became common, and parents were accustomed to limit the number of their offspring, they would have the best chance of forming their children's characters, watching their progress, even to manhood, and seeing them settled in the world; instead of leaving them, while young and inexperienced, as they who become parents at a late age must expect to do, to the mercy of fortune and the guidance of strangers.

My readers will remark, that all the arguments I have hitherto employed, apply strictly to the present order of things, and the present laws and system of marriage. No one, therefore, need be a moral heretic on this subject, to

present false situation of society, we must set down to the black account the wretched, wretched consequences, (terminating not unfrequently in incurable insanity,) of this vice, the preposterous offspring of modern civilization. Physicians say that onanism at present prevails, to a lamentable extent, both in this country and England. If the recommendations contained in this little treatise were generally followed, it would probably disappear in a single generation.

admit and approve them. The marriage laws might all remain for ever as they are ; and yet a moral check to population would be beneficent and important.

But there are other cases, it will be said, in which the knowledge of such a check would be mischievous. If young women, it will be argued, were absolved from the fear of consequences, they would rarely preserve their chastity. Unlegalized connexions would be common and seldom detected. Seduction would be facilitated. Let us carefully examine this argument.

I fully agree with that most amiable of moral heretics, Shelley, that "Seduction, which term could have no meaning in a rational society, has now a most tremendous one." It matters not how artificial the penalty which society has chosen to affix to a breach of her capricious decrees. Society has the power in her own hands ; and that moral Shylock, Public Opinion, enforces the penalty, even though it cost the life of the victim. The consequences, then, to the poor sufferer, whose offence is but an error of judgment or a weakness of the heart, are the same as if her imprudence were indeed a crime of the blackest dye. And his conduct who, for a momentary, selfish gratification, will deliberately entail a life of wretchedness on one whose chief fault, perhaps, was her misplaced confidence in a hypocrite, is not one whit excused by the folly and injustice of the sentence.† Some poet says,

" The man who lays his hand upon a woman
Save in the way of kindness, is a wretch
Whom 'twere gross flattery to call a coward."

How, then, shall we regard him who makes it a trade to win a woman's gentle affections, betray her generous confidence, and then, when the consequences become apparent, abandon her to dependence, and the scorn of a cold, a self-righteous and a wicked world ; a world which will forgive

* Letter of Percy Bysshe Shelley, of December 5, 1818.

† Every reflecting mind will distinguish between the unreasoning—sometimes even generous imprudence of youthful passion, and the calculating selfishness of the matured and heartless libertine. It is a melancholy truth, that pseudo-civilization produces thousands of seducers by profession, who, while daily calling the heavens to witness their eternal affections, have no affection for any thing on earth but their own profligate selves. It is to characters so utterly worthless as these that my observations apply.

any thing but rebellion against its tyranny, and in whose eyes it seems the greatest of crimes to be unsuspecting and warm-hearted!

And, let me ask, what is it gives to the arts of seduction thier sting, and stamps to the world its victim? Why is it, that the man goes free and enters society again, almost courted and applauded; while the woman is a mark for the finger of reproach, and a butt for the tongue of scandal? Is it not chiefly because she bears about her the mark of what is called her disgrace? She becomes a mother; and society has something tangible against which to direct its anathemas. Nine-tenths, at least, of the misery and ruin which are caused by seduction, even in the present state of public opinion, result from cases of pregnancy. Perhaps the unfeeling selfishness of him who fears to become a father, administers some noxious drug to procure abortion; perhaps—for even such scenes our courts of justice disclose!—perhaps the frenzy of the wretched mother takes the life of her infant, or seeks in suicide the consummation of her wrongs and her woes! Or, if the little being live, the dove in the falcon's claws is not more certain of death than we may be, that society will visit, with its bitterest scoffs and reproaches, the bruised spirit of the mother and the unconscious innocence of the child.

If, then, we cannot do all, shall we neglect a part? If we cannot prevent every misery which man's selfishness and the world's cruelty entail on a sex, which it ought to be our pride and honor to cherish and defend; let us prevent as many as we can. If we cannot persuade society to revoke its unmanly and *unchristian* * persecution of those who are often the best and gentlest of its members—let us, at the least, give to woman what defence we may, against its violence.

I appeal to any father, trembling for the reputation of his child, whether, if she were induced to form an unlegalised connexion, her pregnancy would not be a frightful aggravation? I appeal to him, whether any innocent preventive which shall save her from a situation that must soon disclose all to the world, would not be an act of mercy, of charity, of philanthropy—whether it might not save him from despair, and her from ruin? The fastidious conformist may frown upon the question, but to the father it comes home; and,

* Jesus said unto her, "Neither do I condemn thee."—*John*, viii. 11

whatever his lips may say, his heart will acknowledge the soundness and the force of the argument it conveys.*

It may be, that some sticklers for orthodox morality will still demur to the positions I defend. They will perhaps tell me, as the Committee of a certain Society in this city lately did, that the power of preventing conceptions "holds out inducements and facilities for the prostitution of their daughters, their sisters, and their wives."†

* What is the actual state of society in Great Britain, and even in this republic, that pseudo-civilization, in her superlative delicacy, should so fastidiously scruple to speak of or to sanction, a simple, moral, effectual check to population? Are her sons all chaste and temperate, and her daughters all passionless and pure? I might disclose, if I would, in this very city of New York—and in our neighbor city of Philadelphia—scenes and practices that have come to light from time to time, and that would furnish no very favorable answer to the question. I might ask, whether all the houses of assignation in these two cities are frequented by the known profligate alone? or, whether some of the most outwardly respectable fathers—ay, *mothers* of families—have not been found in resorts frequented and supported only by "good society" like themselves?

As regards Great Britain, I might quote the evidence delivered before a "Committee of the House of Commons, on Laborers' Wages," by Mr. Henry Drummond, a banker, magistrate, and large land-owner, in the county of Surry, in which the following question and answer occur: Q. "What is the practice you allude to of forcing marriages?" A. "I believe nothing is more erroneous than the assertion, that the poor laws tend to imprudent marriages; I never knew an instance of a girl being married until she was with child, nor ever knew of a marriage taking place through a calculation for future support." Mr. Drummond's assertions were confirmed by other equally respectable witnesses; and from what I have myself learnt in conversation with some of the chief manufacturers of England, I am convinced, that the statement, as regards the working population in the chief manufacturing districts, is scarcely exaggerated.

I might go on to state, that the spot on which the Foundling Hospital in Dublin now stands, formerly went by the name of "Murderer's Lane," from the number of child murders that were perpetrated in the vicinity.

I might adduce the testimony of respectable witnesses in proof, that, even among the married, the blighting effects of ergot are not unfrequently incurred; by those very persons, probably, who, in public, would think fit to be terribly shocked at this little book.

But why multiply proofs? The records of every court of justice, nay, the tittle tattle of every fashionable drawing room, sufficiently marks the real character of this prudish and pharisaical world of ours.

† See Letter of the Committee of the Typographical Society to Robert

Truly, but they pay their wives, their sisters, and their daughters, a poor compliment! Is, then, this vaunted chastity a mere thing of circumstance and occasion? Is there but the difference of opportunity between it and prostitution? Would their wives, their sisters, and their daughters, if once absolved from the fear of offspring, become prostitutes—sell their embraces for gold, and descend to a level with the most degraded? In truth, they slander their own kindred; they libel their own wives, sisters, and daughters. If they spoke truth—if fear were indeed the only safeguard of their relatives' chastity, little value should I place on a virtue like that! and small would I esteem his offence, who should attempt or seduce it.*

Dale Owen, published in the *Commercial Advertiser* of the 29th of September, and copied into the *Free Enquirer* of the 9th of October, 1830.

For a statement of the circumstances connected with that letter, and which induced me, at this time, to write and publish the present treatise, see Preface to the New York edition.

* I should like to hear these gentlemen explain, according to what principle they imagine the chastity of their *wives* to grow out of a fear of offspring; so that, if released from such fear, prostitution would follow. I can readily comprehend that the unmarried may be supposed careful to avoid that situation to which no legal cause can be assigned; but a wife must be especially dull, if she cannot assign, in all cases, a legal cause; and a husband must be especially sagacious, if he can tell whether the true cause be assigned or not. This safeguard to married chastity, therefore, to which the gentlemen of the Typographical Committee seem to look with so implicit a confidence, is a mere broken reed; and has been so ever since the days of Bathsheba.

Yet *conjugal* chastity is that which is especially valued. The inconstancy of a wife commonly cuts much deeper than the dishonor of a sister. In that case, then, which the world usually considers of the highest importance, the fear of offspring *imposes no check whatever*. It cannot make one iota of difference whether a married woman be knowing in physiology or not; except perhaps, indeed, to the husbands advantage; in cases where the wife's conscience induces her at least to guard against the possibility of burthening her legal lord with the care and support of children that are not his. Constancy, where it actually exists, is the offspring of something more efficacious than ignorance. And if in the wife's case, men must and do trust to something else, why not in all other cases, where constraint may be considered desirable? Shall men trust in the greater, and fear to trust in the less? Whatever any one may choose to assert regarding his relatives' secret inclinations to profligacy, these arguments may convince him, that if he have any safeguard at present, a perusal of *Moral Physiology* will not destroy it.

'Tis strange that men, by way of supporting an argument, should be

That chastity which is worth preserving is not the chastity that owes its birth to fear and ignorance. If to enlighten a woman regarding a simple physiological fact will make her a prostitute, she must be especially predisposed to profligacy. But it is a libel on the sex. Few, indeed, there are, who would continue so miserable and degrading a calling could they escape from it. For one prostitute that is made by inclination, ten are made by necessity. Reform the laws—equalize the comforts of society, and you need withhold no knowledge from your wives and daughters. It is want, not knowledge, that leads to prostitution.

For myself, I would withhold from no sister, or daughter, or wife of mine, any ascertained fact whatever. It should be to me a duty and a pleasure to communicate to them all I knew myself: and I should hold it an insult to their understandings and their hearts to imagine, that their virtue would diminish as their knowledge increased. Would we but trust human nature, instead of continually suspecting it, and guarding it by bolts and bars, and thinking to make it very chaste by keeping it very ignorant, what a different world we should have of it! The virtue of ignorance is a sickly plant, ever exposed to the caterpillar of corruption, liable to be scorched and blasted even by the free light of heaven; of precarious growth; and even if at last artificially matured, of little or no real value.

I know that parents often think it right and proper to withhold from their children, especially from their daughters, facts the most influential on their future lives, and the knowledge of which is essential to every man and woman's well-being. Such a course has ever appeared to me ill-judged and productive of very injurious effects. A girl is surely no whit the better for believing, until her marriage night, that children are found among the cabbage leaves in the garden. The imagination is excited, the curiosity kept continually on the stretch; and that which, if simply explained, would have been recollected only as any other physiological phenomenon, assumes all the rank and importance and engrossing interest of a mystery. Nay, I am well convinced, that mere curiosity has often led ignorant young people into situations, from which a little more confidence and openness on the part of their parents or guardians, would have effectually secured them.

willing thus to vilify their relatives' character and motives, without first carefully examining whether any thing was gained to their cause, after all, by the vilification.

In the monkish days of mental darkness, when it was taught and believed that all the imaginations and all the thoughts of man are only evil continually, when it was deemed right and proper to secure the submission of the mass by withholding from them the knowledge even how to read and write—in those days, it was all very well to shut up the physiological page, and tell us, that on the day we read therein we should surely die. But those times are past. In this nineteenth century, men and women read, think, discuss, inquire, judge for themselves. If, in these latter days, there is to be virtue at all, she must be the offspring of knowledge and of free inquiry, not of ignorance and mystery. We *cannot* prevent the spread of any real knowledge, even if we would; we *ought* not, even if we could.

This book will make its way through the whole United States. Curiosity and the notoriety which has already been given to the subject, will suffice at first to obtain for it circulation. The practical importance of the subject it treats will do the rest. It needed but some one to start the stone; its own momentum will suffice to carry it forward.

But, if we *could* prevent the circulation of truth, why *should* we? We are not afraid of it ourselves. No man thinks *his* morality will suffer by it. Each feels certain that his virtue can stand any degree of knowledge. And is it not the height of egregious presumption in each to imagine that his neighbor is so much weaker than himself, and requires a bandage which he can do without? Most of all, it is presumptuous to suppose, that that knowledge which the man of the world can bear with impunity, will corrupt the young and the pure-hearted. It is the sullied conscience only that suggests such fears. Trust youth and innocence. Speak to them openly. Show them that you respect them, by treating them with confidence; and they will quickly learn to respect and to govern themselves. Enlist their pride in your behalf; and you will soon see them make it their boast and their highest pleasure to *merit* your confidence. But watch them, and show your suspicion of them but once, and you are the jailor, who will keep his prisoners just as long as bars and bolts shall prevent their escape. The world was never made for a prison-house; it is too large and ill-guarded: nor were parents ever intended for gaol-keepers; their very affections unfit them for the task.

There is no more beautiful sight upon earth, than a family among whom there are no secrets and no reserves; where the young people confide every thing to their elder friends—

for such to them are their parents—and where the parents trust every thing to their children; where each thought is communicated as freely as it arises; and all knowledge given as simply as it is received. If the world contain a prototype of that Paradise, where nature is said to have known no sin or impropriety, it is such a family. And if there be a serpent that can poison the innocence of its inmates, that serpent is SUSPICION.

I ask no greater pleasure than thus to be the guardian and companion of young beings whose innocence shall speak to me as unreservedly as it thinks to itself; of young beings who shall never imagine that there is guilt in their thoughts, or sin in their confidence; and to whom, in return, I may impart every important and useful fact that is known to myself. Their virtue should be of that hardy growth, which *all* facts tend to nourish and strengthen.

I put it to my readers, whether such a view of human nature, and such a mode of treating it, be not in accordance with the noblest feelings of their hearts. I put it to them, whether they have not felt themselves encouraged, improved, strengthened in every virtuous resolution, when they were generously trusted, and whether they have not felt abashed and degraded when they were suspiciously watched, and spied after, and kept in ignorance. If they find such feelings in their own hearts, let them not self-righteously imagine, that they only can be won by generosity, or that the nature of their fellow-creatures is different from their own.

There are other considerations connected with this subject, which farther attest the social advantages of the control I advocate. Human affections are mutable, and the sincerest of mortal resolutions may change.* Every day furnishes instances of alienations, and of separations; sometimes almost before the honey-moon is well expired. In such cases of unsuitability, it cannot be considered desirable that there should be offspring; and the power of refraining from becoming parents until intimacy had, in a measure, established the likelihood of permanent harmony of view and feelings, will be confessed to be advantageous.

The limits which my numerous avocations prescribe to

* Le premier serment que se firent deux êtres de chair, se fut au pied d'un rocher, qui tombait en poussière; ils attestèrent de leur confiance un ciel qui n'est pas un instant le même: tout passait en eux, et autour d'eux; et ils croyaient leurs cœurs affranchis de vicissitudes. O enfans ! toujours enfans ! —DIDEROT *Jacques et son Maître*.

this little treatise, permit me not to meet every argument in detail, which ingenuity or prejudice might put forward. If the world were not actually afraid to think freely or to listen to the suggestions of common sense, three fourths of what has already been said would be superfluous; for most of the arguments employed would occur spontaneously to any rational being. But the mass of mankind have still, in a measure, every thing to learn on this and other moral subjects. The world seems to me much to resemble a company of gourmands, who sit down to a plentiful repast, first very punctiliously saying grace over it; and then, under sanction of the priest's blessing, think to gorge themselves with impunity; as conceiving, that gluttony after grace is no sin. So it is with popular customs and popular morality. Every thing is permitted, if external forms be but respected. Legal roguery is no crime, and ceremony-sanctioned excess no profligacy. The substance is sacrificed to the form, the virtue to the outward observance. The world troubles its head little about whether a man be honest or dishonest, so he knows how to avoid the penitentiary and escape the gallows. In like manner, the world seldom thinks it worth while to enquire whether a man be temperate or intemperate, prudent or thoughtless. It takes especial care to inform itself whether in all things he conforms to orthodox requirements; and, if he does, all is right. Thus men too often learn to consider an oath an absolution from all subsequent decencies and duties, and a full release from all after responsibilities. If a husband maltreat his wife, the offence is venal: for he premised it by making her, at the altar, an "honest woman." If a married father neglect his children, it is a trifle; for grace was regularly said, before they were born.

So true is this, that if some heterodox moralist were to throw out the idea, that many of the rudenesses and jarrings, and much of the indifference and carelessness of each others' feelings that are exhibited in married life, might be traced to the almost universal custom (in this country, though not in France) of man and wife continually occupying the same bed—if he put it to us whether such a forced and too frequent familiarity were not calculated to lessen the charms and pleasures, and diminish the respectful regard and deference, which ought ever to characterize the intercourse of human beings—if, I say, some heretical preferer of things to forms were to light upon and express some such unlucky

idea as this, ten to one the married portion of the community would fall upon him without mercy, as an impertinent intermeddler in their most legitimate rights and prerogatives.

With such a world as this, it is a difficult matter to reason. After listening to all I have said, it may perhaps cut me short by reminding me, that nature herself declares it to be right and proper, that we should reproduce our species without calculation or restraint. I will ask, in reply, whether nature also declares it to be right and proper, that when the thermometer is at 96, we should drink greedily of cold water, and drop down dead in the streets? Let the world be told, that if nature gave us our passions and propensities, she gave us also the power wisely to control them; and that, when we hesitate to exercise that power, we descend to a level with the brute creation, and become the sport of fortune—the mere slaves of circumstance.*

To one other argument it were not, perhaps, worth while to advert, but that it has been already speciously used to excite popular prejudice. It has been said, that to recommend to mankind prudential restraint in cases where children cannot be provided for, is an insult to the poor man; since all ought to be so circumstanced that they might provide amply for the largest family. Most assuredly all *ought* to be so circumstanced; but all *are* not. And there would be just as much propriety in bidding a poor man go and take by force a piece of Saxony broadcloth from his neighbor's store, because he *ought* to be able to purchase it, as to encourage him to go on producing children, because he *ought* to have wherewithal to support them. Let us exert every nerve to correct the injustice and arrest the misery that results from a vicious order of things; but, until we have done so, let us not, for humanity's sake, madly recommend that which grievously aggravates the evil; which increases the burden on the present generation, and threatens with neglect and ignorance the next.

* Some German poet, whose name has escaped me, says,

“ Tapfer ist der Löwensieger,
Tapfer ist der Weltbezwinger,
Tapferer, wer sich selbst bezwang!”

“ Brave is the lion victor,
Brave the conqueror of a world,
Braver he who controls himself!”

It is a noble sentiment, and very appropriate to the present discussion.

And now, let my readers pause. Let them review the various arguments I have placed before them. Let them reflect how intimately the instinct of which I treat is connected with the social welfare of society. Let them bear in mind, that just in proportion to its social influence, is it important that we should know how to control and govern it; that, when we obtain such control, we may save ourselves, and what we ought to prize much more highly, may save our companions and our offspring, from suffering or misery; that, by such knowledge, the young may form virtuous connexions, instead of becoming profligate or ascetics; that, by it, early marriage is deprived of its heaviest consequences, and seduction of its sharpest sting; that, by it, man may be saved from moral ruin, and woman from desolating dishonor: that by it the first pure affections may be soothed and satisfied, instead of being thwarted or destroyed—let them call to mind all this, and then let them say, whether the possession of such control be not a blessing to man.

CHAPTER VI.

THE SUBJECT CONSIDERED IN ITS IMMEDIATE CONNECTION WITH PHYSIOLOGY.

It now remains, after having spoken of the *desirability* of obtaining control over the instinct of reproduction, to speak of its *practicability*.

As, in this world, the value of labor is too often estimated almost in proportion to its inutility; so, in physical science, contested questions seem to have attracted attention and engaged research, almost in the inverse ratio of their practical importance. We have a hundred learned hypotheses for one decisive practical experiment. We have many thousands of volumes written to explain fanciful theories, and scarcely as many dozens to record ascertained facts.

It is not my intention, in discussing this branch of the subject, to examine the hundred ingenious theories of generation which ancient and modern physiologists have put forth. I shall not inquire whether the future human being owes its first existence, as Hippocrates and Galen assert, and Buffon very ingeniously supports, to the union of two life-giving

fluids, each a sort of extract of the body of the parent, and composed of organic particles similar to the future offspring; or whether, as Harvey and Haller teach, the embryo reposes in the ovum until vivified by the seminal fluid, or perhaps only by the *aura seminalis*: or whether, according to the theories of Leuwenhoeck and Boerhaave, the future man first exists as a spermatic animalcula, for which the ovum becomes merely the nourishing receptacle, or whether, as the ingenious Andry imagines, a vivifying worm be the more correct hypothesis; or whether, finally, as Pérault will have it,* the embryo beings (too wonderfully organized to be supposed the production of any mere physical phenomenon) must be imagined to come directly from the hands of the Creator, who has filled the universe with these little germs, too minute, indeed, to exercise all the animal functions, but still self-existent, and awaiting only the insinuation of some subtle essence into their microscopic pores, to come forth as human beings. Still less am I inclined to follow Hippocrates and Tertullian in their inquiries, whether the soul is merely introduced into the foetus, or pre-exists in the semen, and becomes, as it were, the architect of its future residence, the body;† or to attempt a refutation of the hypothesis of the metaphysical naturalist,‡ who asserts, (and adduces the infinite indivisibility of matter in support of the assertion,) that the actual germs of the whole human race, and of all that are yet to be born, existed in the ovaria of our first mother, Eve. I leave these and fifty other hypotheses, as ingenious and as useless, to be discussed by those who seem to make it a point of honor to leave no fact unexplained by some imagined theory; and come at once to positive experience and actual observation.

It is exceedingly to be regretted that mankind did not spend some small portion of the time and industry which has been wasted on theoretical research, in collecting and collating the *actual experience* of human beings. But this task, too difficult for the ignorant, has generally been thought too simple and common-place for the learned. To

* See "Histoire de l'Académie des Sciences," for the year 1679, page 279.

† Hippocrates positively asserts this latter hypothesis, and is outrageous against all sceptics in his theory. In his work on diet, he tells us, "*Si quis non credat animam animæ misceri, demens est.*" Tertullian warmly supports the orthodoxy of this opinion.

‡ Bonner, I believe.

this circumstance, joined to the fact, that it is not thought fitting or decent for human beings freely to communicate their personal experience on the important subject now under consideration—to these causes are attributable the great and otherwise unaccountable ignorance which so strangely prevails, even sometimes among medical men, as to the power which man may possess over the reproductive instinct. Some physicians deny that man possesses any such power. And yet, if the thousandth part of the talent and research had been employed to investigate this momentous fact, which has been turned to the building up of idle theories, no commonly intelligent individual would be ignorant of the truth.

I have taken great pains to ascertain the opinions of the most enlightened physicians of Great Britain and France on this subject; (opinions which popular prejudice will not permit them to offer publicly in their works;) and they all concur in admitting, what the experience of the French nation *positively proves*, that man may have a complete control over this instinct; and that men and women may, without injury to health, or violence to the moral feelings, and with very little diminution of the pleasure which accompanies the gratification of the instinct, refrain at will from becoming parents. It has chanced to me, also, to gain the confidence of several individuals, who have communicated to me, without reserve, their own experience; and all this has been corroborative of the same opinion.

Thus, though I pretend not to speak positively to the details of a subject, which will then only be fully understood when men acquire sense enough simply and unreservedly to discuss it, I may venture to assure my readers, that the main fact is incontrovertible. I shall adduce such facts in proof of this as may occur to me in the course of the investigation.

However various and contradictory the different theories of generation, almost all physiologists are agreed, that the entrance of the sperm itself (or of some volatile particles proceeding from it) into the uterus, must precede conception. This it was that probably first suggested the possibility of preventing conception at will.

Among the modes of preventing conception which may have prevailed in various countries, that which has been adopted, and is now practised, by the cultivated classes on the continent of Europe, by the French the Italians and I

believe, by the Germans and Spaniards, consists of complete withdrawal, on the part of the man, immediately previous to emission. *This is, in all cases, effectual.* It may be objected, that the practice requires a mental effort and a partial sacrifice. I reply, that, in France, where men consider this, (as it ought ever to be considered, when the interests of the other sex require it,) a *point of honor*—all young men learn to make the necessary effort; and custom renders it easy and a matter of course. As for the sacrifice, shall a trifling (and it is but a very trifling) diminution of physical enjoyment be suffered to outweigh the most important considerations connected with the permanent welfare of those who are the nearest and dearest to us? Shall it be suffered to outweigh the risk of incurring heavy and sacred responsibilities, ere we are prepared to fulfil them? Shall it be suffered to outweigh a regard for the comfort, the well-being—in some cases, the *life*, of those whom we profess to love? The most selfish will hesitate deliberately to reply, in the affirmative, to such questions as these. A cultivated young Frenchman, instructed as he is, even from his infancy, carefully to consult, on all occasions, the wishes, and punctiliously to care for the comfort and welfare, of the gentler sex, would learn, almost with incredulity, that, in other countries, there are men to be found, pretending to cultivation, who were less scrupulously honorable on this point than himself. You could not offer him a greater insult than to presuppose the possibility of his forgetting himself so far as thus to put his own momentary gratification, for an instant, in competition with the wish or the well-being of any one to whom he professed regard or affection.*

I know it will be argued, that men in the mass are not sufficiently moral to adopt this recommendation; because they will not make any voluntary sacrifice of animal enjoyment however trifling. I do not see that. Hundreds of voluntary

* A Frenchman belonging to the cultivated classes, would as soon bear to be called a coward, as to be accused of causing the pregnancy of a woman who did not desire it; and that, too, whether the matrimonial law had given him legal rights over her person or not. Such an imputation, if substantiated, would shut him out for ever from all decent society and most properly so. It is a perfect barbarity, and ought to be treated as such.

When we begin to look to genuine morality, instead of empty or offensive forms, these are the principles of honor we shall implant in our children's minds: and then we shall have a world of courtesy and kindness, instead of a scene of legal outrage, or hypocritical profession.

sacrifices are daily made to fashion—to public opinion. Let but public opinion bear on this point in other countries, as it does among the more enlightened classes in France, and similar effects will be produced.

The matter is a trifle. The mere act of animal satisfaction, counts with any man of commonly cultivated feelings, as but a small item in the aggregate of enjoyment which satisfied affection affords; and, surely, whether that act be at all times attended with the utmost degrees of physical pleasure or not, must, even with the selfish, be a secondary and unimportant consideration. His moral sentiments must be especially weak or uncultivated, who will not admit, that it is the gratification of the social feelings—the repose of the affections—which, at all times, constitutes the chief charm of human intercourse.

The least injurious among the present checks to population, celibacy, is a mortification of the affections, a violence done to the social feelings, sometimes a sacrifice even of the health. Not one of these objections can be urged to the trifling restraint proposed.

As to the cry which prejudice may raise against it as being unnatural, it is just as unnatural, and no more so, than to refrain, in a sultry summer's day, from drinking, perhaps, more than a pint of water at a draught, which prudence tells us is enough, while inclination bids us drink a quart. *All* thwarting of any human wish or impulse may, in one sense, be called unnatural; it is not, however, oft-time the less prudent and proper, on that account. Then, too, if this trifling restraint is to be called unnatural, what shall we say of celibacy?

As to the practical efficacy of this simple preventive, the experience of France, where it is extensively practised, might suffice in proof. I know, at this moment, several married persons who have told me, that, after having had as many children as they thought prudent, *they had for years employed this check, with perfect success.* For the satisfaction of my readers, I will select one particular instance.

I knew personally and intimately for many years, a young man of strict honour, in whose sincerity I ever placed confidence, and who confided to me the particulars of his situation. He was just entering on life, with slender means, and his circumstances forbade him to have a large family of children. He, therefore, having consulted his young wife, practised this restraint, I believe for about eighteen months, and with perfect success. At the expiration of that period, their situation being more favourable, they resolved to become

parents; and, in a fortnight after, the wife found herself pregnant. My friend told me, that though he felt the partial privation a little at first, a few weeks' habit perfectly reconciled him to it; and that nothing but a deliberate conviction that he might prudently now become a parent, and a strong desire on his wife's part to have a child, induced him to alter his first practice. I believe I was the only one among his friends to whom he ever communicated the real state of the case; and I doubt not there are, even in this country, hundreds of similar cases which the world never learns any thing about. Hence the doubts and ignorance which exist on the subject.

I add another instance. A short time since, a respectable and very intelligent father of a family, about thirty-five years of age, who resides west of the mountains, called at our office. Conversation turned on the present subject, and I expressed to him my conviction, that this check was effectual. He told me he could speak from personal experience. He had married young, and soon had three children. These he could support in comfort, without running into debt or difficulty; but, the price of produce sinking in his neighbourhood, there did not appear a fair prospect of supporting a large family. In consequence, he and his wife determined to limit their offspring to three. They have accordingly employed the above check for seven or eight years; have had no more children; and have been rewarded for their prudence by finding their situation and prospects improving every year. He confirmed an opinion I have already expressed, by stating, that custom completely reconciled him to any slight privation he might at first have felt. I asked him, whether his neighbors generally followed the same practice. He replied, that he could not tell; for he had not thought it prudent to speak with any but his own relations on the subject, one or two of whom, he knew, had profited by his advice, and afterwards expressed to him their gratitude for the important information.

It is unnecessary farther to multiply instances. The fact that this check is in common practice, and known to be efficacious, in France, is alone sufficient evidence of its practicability and safety.

I can readily imagine, that there are men, who, in part from temperament, but much more from the continued habit of unrestrained indulgence, may have so little command over their passions, as to find difficulty in practising it; and some, it may be, who will declare it to be impossible. If any

there be to whom it is impossible, (which I very much doubt, I am at least convinced that the number is exceedingly small; not a fiftieth part of those who may at first *imagine* such to be their case.

I may add, that *partial* withdrawal is not an infallible preventive of conception.

Other modes of prevention have been employed. I have selected this, because I judge it to be at once the most simple, and the most efficacious. Those who have employed it for years, seem to concur in the opinion that it is, as regards its influence on health, innocent;* it has even been said to produce on the human system an influence similar to that of temperance in diet; but this I doubt. As regards any moral impropriety in its use, enough methinks has already been said, to convince all except those who *will* not be convinced, that to employ it, in all cases where prudence or the well-being of our companions requires it, is an act of practical virtue.

It may be said, and said truly, that this check places the power chiefly in the hands of the man, and not, where it ought to be, in those of the woman. She, who is the sufferer, is not secured against the culpable carelessness, or perhaps the deliberate selfishness, of him who goes free and unblamed whatever may happen. To this, the reply is, that the best and only effectual defence for women is to refuse connexion with any man *void of honor*. An (almost omnipotent) public opinion would thus be speedily formed: one of immense moral utility, by means of which the man's social reputation would be placed, as it should be, in the keeping of women, whose moral tact and nice discrimination in such matters is far superior to ours. How mighty and beneficent the power which such an influence might exert, and how essentially and rapidly it might conduce to the gradual, but thorough extir-

* Experience, extensive and carefully recorded, can alone verify, as in a matter so important ought to be verified, the opinion here expressed touching the innocence to health of the preventive recommended. No one is justified in speaking positively on such a subject, until he has accumulated a greater mass of facts than I, or perhaps any other individual, have yet had the means of ascertaining. The subject once agitated, such facts will gradually come to light. In the mean time let us bear in mind, that the truth and importance of the abstract principle rest not on the accuracy of the physiological items here adduced. A preventive check to population is a thing in itself good and desirable, or it is the reverse. If good and desirable, men and women will ultimately perceive it to be so, and will search and experiment until they discover what practice is best. Of this, as of other branches of physical science, time alone can elucidate and substantiate the details.

pation of those selfish vices, legal and illegal, which now disgrace and brutify our species, it is difficult even to imagine.

In the silent, but resistless progress of human improvement, such a change is fortunately inevitable. We are gradually emerging from the night of blind prejudice and of brute force; and, day by day, rational liberty and cultivated refinement, win an accession of power. Violence yields to benevolence, compulsion to kindness, the letter of law to the spirit of justice: and, day by day, men and women become more willing, and better prepared, to entrust the most sacred duties (social as well as political) more to good feeling and less to idle form—more to moral and less to legal keeping.

It is no question whether such reform will come: no human power can arrest its progress. How slowly or how rapidly it may come, is a question; and depends, in some degree, on adventitious circumstances. Should this little book prove one among the number of circumstances to accelerate, however slightly, that progress, its author will be repaid, ten times over, for the trifling labor it has cost him.

In conclusion, it may be useful to state to the reader the following facts. A knowledge of this and other checks to population has been, for many years, extensively disseminated in most of the populous towns in Great Britain by hundreds of thousands of hand-bills which were gratuitously distributed from benevolent motives. The men who were first instrumental in making them known in England are all elderly men, fathers of families of children grown up to be men and women; men of unquestioned integrity and moral character; many of them men of science, and some of them known as the first political economists of the age. Beside the allusion to the subject already given from the *Encyclopædia Britannica*, it is adverted to in Place's "Illustrations of the principles of Population;" in Mill's "Elements of Political Economy;" in Thompson's "Distribution of Wealth," and probably in other works with which I am unacquainted. It was also (disguisedly) broached in several English newspapers, and was preached in lectures to the laboring classes, by a benevolent man, at Leeds. I do not believe the subject has ever been touched upon, except by men of irreproachable moral character, and generally of high standing in society. The chief difference between this little treatise, and the allusions made by the distinguished authors above mentioned, is, that what public opinion would only permit them to insinuate, I venture to say plainly

My readers may implicitly depend on the accuracy of the facts I have stated. Though, in the present state of public opinion, I may not, for obvious reasons, give *names* in proof, yet it is evident that I can have no motive whatever to mislead or deceive. I shall consider it a favor if any individuals who can adduce, *from personal experience*, facts connected with this subject, will communicate them to me.

Note. The enlightened Condorcet, in his well-known "*Esquisse des progrès de l'esprit humain*," very distinctly alludes to the safety and facility with which population might be restrained, "if reason should but keep pace with the arts and sciences, and if the idle prejudices of superstition should cease to shed over human morals an austerity corrupting and degrading, not purifying or elevating." See his *Esquisse*, pages 285 to 288, *Paris Ed.* 1822. Malthus (see his "*Essays on Population*," *Book III. chap. 1.*) "professes not to understand the French philosopher." No Frenchman could misunderstand him.

CHAPTER VII.

CONCLUDING REMARKS.

THAT most practical of philosophers, Franklin, interprets chastity to mean, *the regulated and strictly temperate satisfaction, without injury to others, of those desires which are natural to all healthy adult beings.* In this sense chastity is the first of virtues, and one most rarely practised, either by young men or by married persons, even when the latter most scrupulously conform to the letter of the law.*

The promotion of such chastity is the chief object of the present work. It is all-important for the welfare of our race, that the reproductive instinct should never be selfishly indulged; never gratified at the expense of the well-being of our companions. A man who, in this matter, will not consult, with scrupulous deference, the slightest wishes of the other sex; a man who will ever put his desires in competition with theirs, and who will prize more highly the pleasure he receives than that he may be capable of bestowing—such a man, appears to me, in the essentials of character, a brute.

* My father, Robert Owen's definition of chastity is also an excellent and an important one: "PROSTITUTION, Sexual intercourse *without* affection: CHASTITY, Sexual intercourse *with* affection."

The brutes commonly seek the satisfaction of their propensities with straight-forward selfishness, and never calculate whether their companions are gratified or teased by their importunities. Man cannot assimilate his nature more closely to theirs than by imitating them in this.

Again. There is no instinct in regard to which strict temperance is more essential. All our animal desires have hitherto occupied an undue share of human thoughts; but none more generally than this. The imaginations of the young and the passions of the adult are inflamed by mystery or excited by restraint, and a full half of all the thoughts and intrigues of the world has a direct reference to this single instinct. Even those who, like the Shakers, "crucify the flesh," are not the less occupied by it in their secret thoughts; as the Shaker writings themselves may afford proof. Neither human institutions nor human prejudices can destroy the instinct. Strange it is, that men should not be content rationally to control and wisely to regulate it.

It is a question of passing importance, "How may it best be regulated?" Not by a Shaker vow of monkish chastity. Assuredly not by the world's favorite regulator, ignorance. No. Do we wish to bring this instinct under easy government, and to assign it only its due rank among human sentiments? Then let us cultivate the intellect, let us exercise the body, let us usefully occupy the time, of every human being. What is it gives to passion its sway, and to desires their empire, now? It is vacancy of mind; it is listlessness of body; it is idleness. A cultivated race are never sensual; a hardy race are seldom love-sick; an industrious race have no time to be sentimental. Develop the moral sentiments, and they will govern the physical instincts. Occupy the mind and body usefully, intellectually; and the propensities will obtain that care and time only which they merit. Upon any other principle we may doctor poor human nature for ever, and shall only prove ourselves empirics in the end. Mortifications, vestal vows, mysteries, bolts and bars, prudish prejudices—these are all quack-medicines; and are only calculated to prostrate the strength and spirits, or to heighten the fever, of the patient. If we will dislodge error and passion, we must replace them by something better. They say that a vacuum cannot exist in nature. Least of all can it exist in the human mind. Empty it of one folly, cure it of one vice, and another flows in to fill the vacancy, unless it find it already occupied by intellectual exercise and common sense

Husbands and fathers ! study Franklin's definition of **chastity**. Your fears, your jealousies, have hitherto been on the stretch to watch and guard : reflect whether it be not pleasanter and better, to enlighten and trust.

Honest ascetics ! you have striven to mortify the flesh ; ask yourselves whether it be not wiser to control it. You have sought to crucify the body ; consider whether it be not **more** effectual to cultivate the mind. Have you succeeded in spiritualizing your secret thoughts ? If not, inquire whether every human propensity, duly governed, be not a benefit and a blessing to the nature in which it is inherent.

Human beings, of whatever sex or class ! examine dispassionately and narrowly the influence which the control here recommended will produce throughout society. Reflect whether it will not lighten the burdens of one sex, while it affords scope for the exercise of the best feelings of the other. Decide whether its tendency be not benignant and elevating : conducive to the exercise of **practical** virtue, and to the permanent welfare of the human race.

APPENDIX

TO THE FIFTH EDITION.

Reception of the Work by the Public. Opinion of a talented Author. Opinion of a Physician and Professor. Letter from a Mechanic. The work never intended as a political panacea. Transmission of hereditary disease. Letter on the subject. Letter from a French gentleman. Physiological argument in favor of temperance. Experience of two members of the Society of Friends. Objection of J. W. Objections by a physician of Indiana. Answer to them. Weighty objections. Suggestion in a letter from Manchester.

New-York, June 25, 1831

SEVEN months have not yet elapsed since the first publication of "MORAL PHYSIOLOGY;" and already I am called upon to prepare a fifth edition. If I am pleased (as what author is not) to see that my labors are appreciated by the public, I am also reminded of the additional obligations I lie under, to render the little treatise as complete and as free from error and inaccuracy as possible.

I have therefore carefully revised the work, and made such amendments as have suggested themselves during these seven months. And as, in the course of that time, I have received a multitude of communications (some verbal, but chiefly by letter) on the subject in question, I shall here add, in the shape of Appendix, such extracts from, and comments on, a few of these, as seem to me interesting and useful.

I expected much opprobrium from the work; and have been not a little surprised to find my expectations agreeably dis-

appointed. Never, in my life, have I written any thing that so nearly united the suffrages of all whose opinion I care for, or which has been suffered to spread more quietly by our opponents. In this, these latter have acted wisely. Had they abused it, it might have been the Appendix to the *twentieth*, not to the *fifth*, edition I should now be writing.

The sentiments of approval which have reached me from various quarters, have, in the expressive language of the Old Book, "strengthened my hands and encouraged my heart;" for though the world's opinion be worth little, there are individuals in it whose opinion is worth much; and though a consciousness of rectitude may support a man against *all* opinions, yet it is pleasant to find, now and then, in one's progress, concurrent sentiments from those we esteem.

I imagine that it may afford similar encouragement, in a degree, to any of my readers who may chance to approve what they read, if I quote for them a few of these opinions. I begin by selecting for the purpose two, which come from men both known to me, as to the American public, only by their writings. Could I give the names of the writers, these would be sufficient to secure for their opinions a weight which no anonymous sentiments can obtain. But, in the present state of public opinion, I do not feel myself at liberty to do so. My readers must therefore be content to take my word for it, that both the writers are gentlemen who have displayed in their works talents of a high order, and whose personal acquaintance I should highly value.

I extract from the first letter the following:

"I am greatly obliged to you for sending me your 'Moral Physiology.' I have read it with pleasure and instruction. I see not why you should anticipate censure, from any quarter, for its publication. It contains no sentiment or doctrine which strikes me unfavorably, or which any person could wish suppressed. Had the same thoughts occurred to me, I should have entertained them, and possibly published them, without the least suspicion of offence to delicacy or good morals.

"I fully concur with you, that truth can do the world no harm. Nor do I doubt that he would be deemed a benefactor, (even an exceedingly great benefactor,) who can teach man how to limit his powers of reproduction without abridging his enjoyments."

Again, the same correspondent says :

"The value of the power to limit offspring is, I think, very separable from any theory which involves consequences arising from

the extent of population which the earth can sustain. The limitation is a matter which concerns the present comfort of individuals, in their private capacity; while the extent of the earth's ultimate fecundity concerns only the thoughts of speculatists and politicians. I say this, because I am not troubled by the spectre of Malthus."

This appears to me an enlightened, and also a very practical view of the subject. *The political economy of the question ought ever to be kept separate from its moral bearings.* The consequences involved by the former, are distant, and may be called theoretical; while those resulting from the latter, are immediate, and of daily recurrence in practice. If there were no tendency whatever in the human race to increase beyond its present numbers, the question would still be one of vital interest, and the consequences it involves would still be of surpassing importance to man in his social and domestic relations. The more I reflect on the subject, the more thoroughly convinced I am, *that man can never attain to any thing like social cultivation, without a knowledge of the means to limit, at pleasure and without much sacrifice of enjoyment, his power of reproduction.* And I cannot but think, that all who have seen much of the civilised world, and carefully traced out the various causes of the vices and miseries that pervade it, will, upon reflection, concur with me in the opinion.

The second writer of whom I spoke (an eminent physician and professor) says:

"I have received your 'Moral Physiology.' Your boldness and independence are entitled to great respect. It is a very important question, and ought to be brought forward, that the public opinion concerning it may be based on the only proper ground, full and free and patient public discussion. Your method of handling the subject I approve. *Place*, the political economist, suggests the remedy more boldly than any other."

The next communication from which I shall copy is from a young man of excellent character, living in a neighbouring state, and now one of the conductors of a popular periodical. After suggesting to me the propriety of re-publishing some English works now out of print, he proceeds as follows:

"——, February 23, 1831.

Had I not been addressing you upon another subject, I should not have ventured to obtrude on you my small meed of approbation, due to your last work; but I cannot let slip this opportunity

of endeavouring to express how much I feel indebted to you for its publication.

“ To know how I am so indebted, it is necessary you should also know something of my situation in life : and when it is described, it is perhaps a description of the situation of two-thirds of the journeymen mechanics of this country.

“ I have been married nearly three years, and am the father of two children. Having nothing to depend upon but my own industry, you will readily acknowledge that I had reason to look forward with at least some degree of disquietude to the prospect of an increasing family and reduced wages : apparently the inevitable lot of the generality of working men. Under these circumstances, I saw W. Jackson’s article in the Delaware Free Press ; but my feelings as a freeman (nominally) revolted at it, and I must say that I felt greatly pleased when I found that his system did not meet your approbation. You had spoken upon the subject, but, like the Nazarene Reformer, you spoke in parables. ‘ Every Woman’s Book ’ I could not see ; and, had not Dr. Gibbons afforded me an example of how much you might be misrepresented, I might have been tempted to believe the slanders circulated regarding you.

“ I had apparently nothing left but to let matters take their own course, when your ‘ Moral Physiology ’ made its appearance.

“ I read it ; and a new scene of existence seemed to open before me. I found myself, in this all-important matter, a free agent, and, in a degree, the arbiter of my own destiny. I could have said to you, as Selim said to Hassan,

‘ Thou’st hewed a mountain’s weight from off my heart.’

My visions of poverty and future distress vanished ; the present seemed gilded with new charms, and the future appeared no longer to be dreaded. But you can better imagine, than I can describe, the revolution of my feelings.

“ I have since endeavoured to circulate the little book as widely as my limited opportunities permit, and shall continue to do so, believing it to be the most useful work that has made its appearance since the publication of Paine’s ‘ Common Sense ; ’ and convinced that, by so doing, I shall render you the most acceptable return, in my power to make, for the benefit you have conferred upon me as an individual

G.”

The next extract, from an inhabitant of Pennsylvania, I have selected chiefly as it furnishes a beautiful, and, alas ! a rare, ex-

ample, of that parental conscientiousness which scruples to impair existence, where it cannot also impart the conditions necessary to render that existence happy

“———, *March 23, 1831.*

* * “I use no meat, unless eggs may be considered such; I drink neither tea, coffee, nor any thing more exciting than milk and water; and, like yourself, I am fully satisfied, having no craving after the luxuries of the table. With regard to ‘Moral Physiology,’ let the following facts speak:

“I was born of poor parents, and early left an orphan. When of age, though my circumstances promised poorly for the support of a family, I desired to marry, knowing that a good wife would greatly add to my happiness. The check spoken of in your book (withdrawal) presented itself to my mind. And for seven years that I have now been married, I have continued to practise it. I was successful in business, and acquired the means of maintaining a family; but still I have refrained, because my constitution is such an one as I think a parent ought not to transmit to his offspring. I prefer refraining from giving birth to sentient beings, unless I can give them those advantages, physical as well as moral and intellectual, which are essential to human happiness.

“One thing I have observed, that since I have adopted a simple diet, and laid by all artificial stimuli, not only is my health better and my mind more clear, but I can abstain, at will, without injury or inconvenience, from sexual connexion for any length of time;* and this without having, in the least, lost any power in that respect. T.”

* We applaud as a marvel, the continence of Scipio. Such continence—and amid circumstances far more trying—is habitually found (under no other restraint than that of public opinion) among the native Indians of our continent. A friend of mine, whose family was captured by a party of Mohawk Indians some fifty years ago, informed me, that four young women (two of them of considerable beauty) who were made prisoners on that occasion, were not once, during a residence of several years, addressed, even with the remotest degree of sexual importunity, by an Indian, old or young, though living with them in the same wigwam. These young women were the near relatives of the friend who related this fact to me; and it was from their own lips he obtained it. Yet these were savages.

How common would be such virtue among ourselves, but for the artificial stimuli, and as artificial restraints, which custom and law make prevalent among us.

R. D. O.

From the letter of an aged French gentleman, who holds a public office in the western country, I translate the following; and I would that every young man and woman in these United States could read it:

“I have read your little work with much interest, and desire that it may have a wide circulation, and that its recommendations may be adopted in practice. If you publish a third edition, I could wish that you would add a piece of advice of the greatest importance, especially to young married persons. Many women are ignorant, that, in the gratification of the reproductive instinct, the exhaustion to the man is much greater than to the woman: a fact most important to be known, the ignorance of which has caused more than one husband to forfeit his health, nay, his *life*. *Tissot* tells us, that the loss by an ounce of semen is equal to that by forty ounces of blood;* and that in the case of the healthiest man, nature does not *demand* connexion oftener than once a month.†

“How many young spouses, loving their husbands tenderly and disinterestedly, if they were but informed of these facts, would watch over and preserve their partners’ healths, instead of exciting them to over-indulgence!

“I send you a copy of Italian verses,‡ appropriate, like the German stanza you have quoted in your work, to the above remarks:

‘ Merta gli allori al crine
Chi scende in campo armato,

* This of course must be rather a matter of conjecture and approximation, than of accurate calculation. R. D. O.

† And I doubt whether she *permits* it without more or less injury, to the average of constitutions, oftener than once a week. I am convinced that any young man who will carefully note and compare his sensations, will become convinced, that temperance forbids such indulgence, at any rate, more than twice a week, and that he trifles with his constitution who neglects the prohibition. How immeasurably important that parents should communicate to their sons, but especially to their daughters, facts like these!

‡ For the English reader, I have attempted the following imitation of the above lines:

Crown his brows with laurel wreath,
Who can tread the fields of death—

Chi a cento squadre a lato,
 impallidir non sa :
 Ma più gloria ha nel fronte
 Chi, alla ragion soggetto,
 D'un sconsigliato affetto
 Frionfator si fa.

L. G.

I extract the following from my journal:

"A member of the Society of Friends, from the country, called at our office; he informed me that he had been married twenty years, had six children, and would probably have had twice as many, had he not practised withdrawal, which he found, in every instance efficacious. By this means he made an interval of two or three years between the births of each of his children. Having at last a family of six, his wife earnestly desired to have no more; and on one occasion, when she imagined that the necessary precautions had been neglected, she shed tears at the prospect of again becoming pregnant. He said he knew, in his own neighbourhood, several married women who were rendered miserable on account of their continued pregnancy, and would have given any thing in the world to escape, but knew not how."

This gentleman corroborated the opinion I have suggested (page 50,) that the habit of withdrawal had an influence similar to that of temperance in diet. He had found it, he said, much less exhausting than unrestrained indulgence.

Another gentleman, also belonging to the Society of Friends, has since confirmed to me (as a fact proved to him by personal experience) the above opinion. He likewise expressed his conviction that the habit was greatly conducive to the preservation of those first, fresh feelings, so beautiful, and, alas! so evanescent,) under which the married usually come together.

Tread—with armed thousands near—
 And know not what it is to fear.
 But greater far his meed of praise,
 Juster his claim to glory's bays,
 Who, true to reason's voice, to virtue's call,
 Conquers himself, the noblest deed of all.

R. D. O.

In reply to a correspondent, J. W., who cites a case of Priapism mentioned in a Medical Journal some eight or ten years since, and which pathological derangement he thinks was attributable to the habit of withdrawal, I reply, that the concurrent testimony of all who can speak from experience on the subject, disproves not of course the fact he cites, but the propriety of *attributing the effect produced to the cause in question*. Priapism, it is well known, is frequently caused by sexual excess; and was probably so caused in the case alluded to. Such excess is much less likely to take place, when withdrawal is practised, than during unrestrained indulgence.

It now remains for me to notice a communication which I recently received from a medical gentleman residing in Indiana, for whose character I entertain much respect. It regards the physiological portion of the work, which the writer, Dr. S——, thinks is altogether inaccurate.

He refers me to Burns', Denman's, and Dewee's Midwifery, and especially to an essay by Dr. Caldwell, of Transylvania University, on Generation, in proof that all are *not* agreed that the semen must enter the uterus in order to effect impregnation. He instances a case published in the New-York Medical Repository, and another in the Western Quarterly Reporter, in which impregnation was effected, though immediately previous to the child's birth the vagina was found only large enough to admit a common knitting needle, and the medical attendant had, in consequence, to make an artificial passage. And he argues, on the authority of this and other instances where there existed such mechanical obstruction in the vagina, os tinæ, or collum uteri, as to render the passage of the seminal fluid next to impossible, that that fluid does not enter the uterus at all, and, consequently, that the doctrine on which the whole work is founded, is physiologically false; and, as being false, is calculated to do much and cruel mischief. There are two chief theories, he says, now generally received on the subject, the *absorbent* and the *sympathetic*; according to both of which, all that appears absolutely necessary to impregnation is, that the semen should be deposited somewhere in the vagina; *perhaps*, to be taken up by a set of absorbent vessels, and by them conveyed to the ovum, which ovum is, in its turn taken up by the fimbriated ends of the Fallopian tube, and thereby deposited in the uterus: *perhaps* (but I confess this seems to me a very poetical theory,) merely to produce simultaneous and sympathetic action, thereby effecting the great and secret work of nature.

Now, my expression was, that “*almost all physiologists are agreed, that the entrance of the sperm itself, or of some volatile particles proceeding from it, into the uterus, must precede conception.*”^{*} The favorers of the *absorbent* theory will not, I presume, deny this; the few advocates of the *sympathetic* may. Nor am I tenacious as regards any theory whatever, on a subject of which the arcana still remain shrouded in comparative mystery. Enough for my purpose, that the condition indispensable to reproduction is, (as Dr. S—— himself reminds us,) the deposition of the sperm in the vagina. The preventive suggested in “*Moral Physiology,*” *positively precludes the fulfilment of this condition*; and it could only have been, I imagine, by confounding it with the partial expedient of which I have spoken, (*page 50,*) that my medical friend arrived at the conclusion to which I have here alluded.

The only argument which I conceive can be fairly urged against it by the physiologist,† is that to which I have adverted and replied: (*last paragraph of page 49.*)

* In proof that I have not spoken unadvisedly on this subject, I may quote what, I believe, is now considered the highest authority.

“If the most recent works on Physiology are to be credited, the uterus, during impregnation, opens a little, draws in the semen by inspiration, and directs it to the ovarium by means of the Fallopian tubes, whose fimbriated extremity closely embrace that organ.”—*Magendie*, p. 416, *Philad. Ed.*

See also *Blundell's* and *Haighton's* experiments on the rabbit, z. Guy's hospital. See also *Spallanzani's* experiments.

† I feel it to be my duty to add, that, since my arrival in England, I have heard another physiological objection urged against this particular check; namely, that its influence on the female health is sometimes injurious. It has been suggested that the deposition of sperm in the vagina cannot be dispensed with during the period of excitement, without producing mischievous consequences. In so far as this may be a mere theoretical influence—a hazarded opinion, like so many other opinions, as to “what, in the nature of things, surely must be”—in this view of it, I conceive the objection entitled to little or no weight. But in so far as it may be substantiated by facts, it is entitled to much weight. We want to know, not what vague inference suggests, but what actual experience proves. If, unfortunately, experience should prove, that women, in availing themselves of this check, do often, or do sometimes, lose their health, either in consequence of the gratification being imperfect, or from any other cause, then the objection would be fatal; and it would behove us to enquire, whether some other check could not be found, which even if less infallible, should be more innocent: such

Having thus answered all the objections which have hitherto reached me, I conceive it unnecessary to lengthen this Appendix by farther quotations approbatory of the work, or corroborative of the facts it details. Let "Moral Physiology" abide the ordeal of public examination; if found wanting, to be cast aside and forgotten; but if deemed true and useful, to be remembered and approved.

perhaps, as the insertion into the vagina, previously to coition, of a small, moistened sponge, to be immediately afterwards withdrawn: or such as is suggested in the following extract of a letter which I lately received from a gentleman of worth and respectability, residing near Manchester:—

"A mother, whose health was such as to make child-bearing painful and dangerous to her existence, was desirous, after giving birth to two children, no further to increase her family. Her husband's fondness forbade him to act contrary to the wishes of his wife: he had, from some source or other, obtained the information given in your book, and he endeavoured to practise upon it; but alas! he was not sufficiently master of his feelings on one or two occasions, and his wife again found herself *enccinte*.

"After suffering, during the usual period, all the pains she had before experienced, her health becoming daily more debilitated, she gave, at the narrow risk of losing her life, birth to a poor little idiot.

"Since then, a female friend informed her, that, were she to adopt the precaution of giving a strong cough immediately after emission by her husband pregnancy would be prevented. She adopted this expedient, and with success.

"A dear friend of mine, intimate with the lady of whom I have been speaking communicated the fact to me, and further assured me, that several females of her acquaintance had adopted the check and proved its efficacy.

"If, Sir, this be a sure preventive, I think it more safe and natural than withdrawal; and preferable besides, as placing in the hands of the woman, who has more caution and more to suffer also than our sex, the power over her destiny.

"I place these objections and suggestions, as they arise, before the public, though I confess my doubt in regard to the general efficacy of the latter expedient. Let all such suggestions be canvassed, and taken for what they are worth. Thus, and only thus can truth be elicited.—*Note to the Ninth edition*

ELEMENTS OF SOCIAL SCIENCE; or, PHYSICAL, SEXUAL, AND NATURAL RELIGION. An Exposition of the True Cause and Only Cure of the Three Primary Social Evils—POVERTY, PROSTITUTION, and CELIBACY. By a Doctor of Medicine. London: E. TRUELOVE, 256, High Holborn. Fourteenth Edition. Twenty-third Thousand.

*2/6 boards - 3/- cloth
post free*

Translations of this Work have been published in the following languages, and may be had of E. TRUELOVE:—

IN FRENCH.—*Eléments de Science Sociale.* Paris: GERMER BAILLIÈRE, rue de l'Ecole de Médecine, 17. Second Edition, 1873.

IN GERMAN.—*Die Grundzüge der Gesellschaftswissenschaft.* Berlin: ELWIN STAUDE. Second Edition, 1875.

IN DUTCH.—*De Elementen der Sociale Wetenschap.* Rotterdam: NIJGH & VAN DITMAR. In two Parts, 1873 and 1875.

IN ITALIAN.—*Elementi di Scienza Sociale.* Milan: GAETANO BRIGOLA. Second Edition, 1875.

IN PORTUGUESE.—*Elementos de Sciencia Social.* Lisbon: SILVA JUNIOR. 1876.

OPINIONS OF THE PRESS.

"This is the only book, so far as we know, in which at a cheap price and with honest and pure intent and purpose, all the questions affecting the sexes, and the influence of their relations on society, are plainly dealt with. It has now been issued in French as well as in English, and we bring the French edition to the notice of our friends of the International Working Men's Association, and of our subscribers in France and Belgium, as essentially a poor man's book."—*National Reformer*, edited by Mr. Charles Bradlaugh.

"The Elements of Social Science is a most remarkable work, written by a man evidently with great knowledge of pathology and political economy. It will be greatly liked or disliked, according to the 'school' of the reader; but no one can fail to consider it as one of the most remarkable works of the day, on the subjects of which it treats. We are told that it has been largely read in London by medical men."—*Medical Press and Circular*, February 23rd, 1870.

"A very valuable, though rather heterogeneous book. . . . This is, we believe, the only book that has fully, honestly, and in a scientific spirit recognised all the elements in the problem—How are mankind to triumph over poverty, with its train of attendant evils?—and fearlessly endeavoured to find a practical solution."—*The Examiner*, January 4th, 1873.

"In some respects all books of this class are evils: but it would be weakness and criminal prudery—a prudery as criminal as vice itself—not to say that such a

book as the one in question is not only a far lesser evil than the one that it combats, but in one sense a book which it is a mercy to issue and courage to publish."—*Reasoner*, edited by Mr. G. J. Holyoake.

"We have never risen from the perusal of any work with a greater satisfaction than this."—*Investigator*.

"That book must be read, that subject must be understood, before the population can be raised from its present degraded, diseased, unnatural, and immoral state. We really know not how to speak sufficiently highly of this extraordinary work; we can only say, conscientiously and emphatically, it is a blessing to the human race."—*People's Paper*. By Ernest Jones.

"Though quite out of the province of our journal, we cannot refrain from stating that this work is unquestionably the most remarkable one, in many respects, we have ever met with. Though we differ *toto celo* from the author in his views of religion and morality, and hold some of his remedies to tend rather to a dissolution than a reconstruction of society, yet we are bound to admit the benevolence and philanthropy of his motives. The scope of the work is nothing less than the whole field of political economy."—*The British Journal of Homœopathy*, January, 1860.

"It is because, after an impartial consideration of this book, we feel satisfied that the author has no meretricious professional object to subserve, that we are induced to use its publication as a text for the discussion of a vital and pressing subject; and because it bears evidences of research, thorough although misapplied, professional education, some pretensions to philosophy, and a certain earnestness of misguided conviction of the truth of peculiar prevalent economical theories, which seems to have led him off his feet, and to have induced him to venture upon any extravagance in their support. It is in vain to attempt to hide these subjects out of sight. This one book of 600 closely printed pages is in its third large edition. It is of no use to ignore the topic as either delicate or disgusting. It is of universal interest. It concerns intimately every human being."—*From an adverse review, occupying six columns in THE WEEKLY DISPATCH*, January and February, 1860.

Extract from an Article by Professor MANTEGAZZA, of Florence, in the Journal MEDICO DI CASA, of 16th January, 1874.

"This work has had eleven English editions, two French, a German and a Dutch one; and is about to be published in Italian and in Portuguese; and we who have read and meditated on it, rejoice with the author at this success, auguring for it new and increasing good fortune.

"He is convinced that in this lower world too many people are born, and hence very many of them are condemned either to a premature death, or, what is worse, to a wretched life, oppressed by hunger and suffering. He comes forward therefore to propose what we ourselves have modestly urged in our 'Elements of Hygiene' since 1864, when we said 'Love, but do not have offspring.' A disciple of Malthus and of Stuart Mill, he is well versed in modern philosophy and in political economy, and studies the abstruse problem in all its aspects, setting out from the most elementary domestic hygiene to raise himself gradually to the lofty regions of human dignity and civil progress. A foe to all hypocrisy and prejudice, the author of the 'Elements of Social Science' calls things by their real names, and shrinks only from the excessive sufferings and privations to which the poor children of Adam are condemned. He is firmly convinced that to measure human fecundity in accordance with the economical production of families and of nations is the most certain means of destroying pauperism and all the forms of want; and in this perhaps he is in error, for the evils of modern society have many sources, and with the drying up of one (perhaps even the most fruitful), another and another would present themselves, which only the combined and constant labours of future generations will perhaps be able to overcome. However this may be, the courage with which the author faces one of the most formidable problems of human society is most praiseworthy.

"Human morality is gradually changing its centre of gravity to rest upon a more solid and durable basis. In this new morality the doctrines of Malthus and those of the author of the 'Elements of Social Science' must also have a large share.

In the place of alms giving which humiliates, in the place of charity which caresses an evil that it does not know how to cure, there will be substituted preventive philanthropy, which by studying want and suffering in their most hidden and deep-seated springs, will be able radically to remove them. Jurisprudence, medicine, and morality follow the same movement, are aiming at the same end—to prevent rather than to cure.”

“The motto of the work: ‘The diseases of society can, no more than corporeal maladies, be prevented or cured, without being spoken about in plain language’ (John Stuart Mill), and its dedication to the poor and suffering, are sufficient to show the tendency of the author. He uses, indeed, a directness of expression, an outspokenness, which is seldom met with in our times, and will probably in most circles of so-called refined society be styled *very shocking* if not *cynical*, though in reality it is not so. The author only calls by their names things which we medical men also have to discuss openly among ourselves and with patients, but which are treated by polite society according to the Parisian proverb, ‘cela se fait, mais cela ne se dit pas.’ The author, as appears from the title and from his professional knowledge, is a medical practitioner. He merits, therefore, the attention of his colleagues, the more so because, in the first place, they would scarcely guess from the title that this is a book for medical men—and secondly, because his medical colleagues alone possess the education which permits them to estimate without prejudice the aims and efforts of the author, to try the truth of the facts which he lays down as premises, and, after due consideration, either to accept or reject, or to limit and amend, his conclusions and proposals. . . . The author’s remarks on the social questions in general are among the best and most deeply-felt we have ever read.”—*Schmidt’s Jahrbücher der gesammten Medizin*. Band 152, Heft 1.

“This is one of those books of which little is spoken, but which nevertheless are wont to produce a quiet lasting effect, while finding their readers at length in this way that under the influence of peculiar circumstances one person confidentially tells another that in such and such a work there is something to be found. . . . The author is, as a natural inquirer, what one must perhaps still call a materialist and a Darwinian; as a political economist—and he is by no means an insignificant political economist—he belongs to the left wing of the free trade school, to which, in spite of some differences of opinion, he lends on the whole a great impulse, anticipating with confidence its ultimate and complete victory throughout the whole cultured world.”—*Vierteljahrsschrift für Volkswirtschaft und Culturgeschichte*, edited by J. Faucher. XII. Jahrg.

“One must first accustom himself to the openness with which the author treats his themes; but the work is unquestionably most instructive and interesting, and is written with great knowledge of the subject.”—*Hessische Morgenzeitung*, Dec. 24th, 1871.

“No one, who has turned his thoughts to the solution of the most burning of all questions of the day, the *social* question, and who wishes to devote to it his mental and practical energies, will be able to leave unread this book, whose anonymous author, basing himself on the Malthusian essay ‘On the Principle of Population,’ deduces from it with keen logic a peculiar and most striking theory on the cure of the three primary social evils—poverty, prostitution, and celibacy. . . . Whatever may be said against this fearless laying bare of the most intimate relations of social life and against his whole theory, purely and undisguisedly materialistic as it is—even the opponent of the daring socialist will be unable to deny him the merit of scientific closeness of reasoning, and what is quite as important, of warm and zealous philanthropy; he will rather honour the moral courage and mental energy which the author must have had to work his way out of the bewildering maze of hitherto unsolved problems and conflicts, to a conviction so logically consistent, so luminous, and yet so opposed to established institutions and to the moral sentiments in which men have been brought up.”—*Königsberger Hartungsche Zeitung*. December 4th, 1871.

“The author treats, in an open and unreserved manner, the diseases of the human frame, as well as those of society, because he is convinced, with Stuart Mill, that they can only in this way be prevented and cured. In truth we have learned

from many years' experience that such is the case. We bring therefore to the notice of our readers, and recommend them to procure, this excellent book." *Sonntags-Blatt, Organ für die Freidenker Deutschlands*, edited by Dr. Aug. Specht. January 26th, 1873.

"Many of the author's views are diametrically opposed to our own, but we cannot refrain from describing the book as in very truth an epoch-making one, whose perusal must interest in the highest degree, both the professional man and the educated general reader. Nothing is gained by a prudish avoidance of the subjects treated in the work; they *must* be discussed, and mankind might congratulate themselves if this were always done in so candid and disinterested a manner as by the author of 'The Elements of Social Science.'"—*Hannoversche Anzeigen und Morgenzeitung*. November 14th, 1871.

"A very remarkable book. . . . A regard to the nature of the subjects treated forbids us to enter further into its contents—an exposition of the inner conditions of social life which, for obvious reasons, lie outside the sphere of the daily press. Suffice it to say that we have here to do with a work which differs widely from the common-place productions of the book market, and which will very probably go through no fewer editions in philosophic Germany than in England."—*Reform*, Hamburg, 28th October, 1875.
